ABSTRACT

This report examines the contrasting views of parents and students about what goes on in and around the school building. Two focus groups and eight in-depth interviews were conducted with children in the New York City area in addition to interviews with a nationally representative sample of 1,000 parents of children in public schools and classroom interviews with children in grades 3 through 12. Parents and students are generally satisfied with their schools, and most believe that the school provides a safe and secure environment and a quality education. A majority of students have never been victims of violence. However, there is a sizable proportion of parents who say that their children have at some time been victims of violence, and there is a nearly equal proportion of students who say they have had such experiences. Parents are more likely than students to believe that students receive personal attention from teachers and that they have caring relationships with teachers and peers. Students who have been victims of violence are more reserved with teachers and with other adults and are less likely to talk about their problems. Those who have been victims are more likely to approach personal relationships with assumptions that increase their vulnerability, and they are more likely to distrust and be disrespectful of their peers. Appendix A describes the methodology, and Appendix B contains the survey. Study findings are presented in 165 tables. (SLD)

Surveys in this Series

This report is part of a series of surveys that explores teachers' opinions and brings them to the attention of the American public and policymakers.

- The Metropolitan Life Survey of the American Teacher, 1984 analyzes attitudes of elementary and secondary school teachers toward both public education in the United States and educational reform.
- The Metropolitan Life Survey of the American Teacher, 1985: Strengthening the Profession examines teachers' own agenda for educational reform.
- The Metropolitan Life Survey of the American Teacher, 1986: Restructuring the Teaching Profession explores the current structure of the teaching profession and ways to restructure it.
- The Metropolitan Life Survey of Former Teachers in America, 1986 reflects the views of those who left the teaching profession for other occupations.
- The Metropolitan Life Survey of the American Teacher, 1987: Strengthening Links Between Home and School includes the views of parents of America's schoolchildren and reveals how parents and teachers are united in their commitment to educating America's youth.
- The Metropolitan Life Survey of the American Teacher, 1988: Strengthening the Relationship Between Teachers and Students includes the views of students in grades 4-12, and also focuses on minority teachers' satisfaction with teaching and ways to increase their participation in the profession
- The Metropolitan Life Survey of the American Teacher, 1989: Preparing Schools for the 1990s looks back at the changes in education through the 1980s and looks ahead to the changes teachers say would improve education.
- The Metropolitan Life Survey of the American Teacher 1990. New Teachers: Expectations and Ideals—Part I Entering the Classroom examines the views of first-time teachers entering the classroom in the fall of 1990.
- The Metropolitan Life Survey of the American Teacher, 1991. The First Year: New Teachers Expectations and Ideals returns to the cohort of new teachers who entered the classroom in the fall of 1990 and gauges their attitudes as they conclude their first year in the classroom.
- The Metropolitan Life Survey of the American Teacher 1992. The Second Year: New Teachers' Expectations and Ideals revisits the new teachers after completing two years of teaching in America's classrooms.
- The Metropolitan Life Survey of the American Teacher 1993. Teachers Respond to President Clinton's Education Proposals provides valuable insight onto what teachers believe needs to be done to make our schools safe and productive places for learning.
- The Metropolitan Life Survey of the American Teacher 1993. Violence in America's Public Schools illustrates the concerns of teachers, students and law enforcement officers across the country, about the increasing violence and fears of violence in their schools.

Mini-Surveys – Teachers' Views on Current Issues in Education

- The Metropolitan Life Survey of the American Teacher, 1991. Coming to Terms probes emerging problems related to tightened school budgets.
- The Metropolitan Life Survey of the American Teacher, 1992. Ready or Not: Grade Level Preparedness examines teachers' perspectives on an issue that is key to the new national education goals.

The series also includes several reports on individual states – two surveys of California teachers and one of New York teachers – whose questions parallel the 1984 and 1985 nationwide studies.

AMERICAN TEACHER

FOREWORD FROM METLIFE

Last year MetLife published a major report about violence in America's public schools to provide insight into what teachers, students and law enforcement officers recognize as an escalating problem in schools across the country. Interest in the report on the part of educators, policymakers and the general public persuaded us to explore the issue further. We decided to ask students and parents what they understand to be the factors influencing violence in our nation's schools.

Violence in America's Public Schools: The Family Perspective examines the contrasting views of parents and students about what goes on in and around the school building. An important finding touches on the role the media might play in reinforcing school violence. Seventy-one percent of parents believe the media contribute to violence while only 51 percent of students agree.

The survey provides interesting information about the differences in parents' and students' opinions and experiences. Clearly, students, parents and teachers can learn from one another how best to curb disorder in schools and communities. But to engage in this learning, they must first improve their communications.

We understand their fears relating to school violence, and we hope this survey helps find ways to develop solutions. Once again, Louis Harris and Associates has produced a study that supports the national movement to improve America's public schools.

AMERICAN TEACHER

INTRODUCTION

Violence in America's Public Schools: The Family Perspective is the latest in a series of surveys sponsored by MetLife that focus on education and the opinions and experiences of American teachers, students, and parents. It represents a sustained program of research designed to bring teacher, student, and parent opinions to the attention of the education community and the American public. This is the second volume in a series of reports on violence in America's public schools and the fifteenth survey in this unique series sponsored by MetLife.

This survey focuses on violence in the public schools from the perspective of public school students and their parents. We asked about:

- Communications among students, teachers, and parents;
- Worries and experiences with violence in the schools;
- How violence in school affects the daily lives of school children and their teachers;
- The influence of environmental issues on violence in the schools;
- Belief about who is responsible for helping to prevent or reduce school violence.

We have examined a wide array of factors that may contribute to violence in school, such as the level of parental involvement in school, the impact of vandalism and neighborhood violence, and students' attitudes toward conflict and personal relationships.

Qualitative Research

Beyond the telephone and classroom surveys, two focus groups and eight in-depth interviews were conducted with public school children in the New York City area. These interviews took place both before and after quantitative interviewing was conducted. These students' anecdotes and experiences informed and guided the development of the questionnaires. Students who participated in the later qualitative research also commented on the survey findings used for this report. Their experiences and commentary appear throughout this report as anecdotal evidence.

Survey Method

This survey is based on interviews with a nationally representative sample of 1,000 parents of children attending public school in the third to twelfth grades. This survey also includes interviews with public school students in grades three through twelve. All interviewing was done from April 22 to May 19, 1994. Parents and every school covering grades 3 through 12 had an equal chance of being drawn into the sample and are representative of parents and children nationwide. A detailed survey methodology is provided in Appendix A. Appendix B contains questionnaires with marginal frequencies for each response.

Notes on Reading Tables

An asterisk (*) on a table signifies a value of less than one-half percent (0.5%). A dash represents a value of zero. Percentages may not always add to 100% because of computer rounding, or multiple answers on particular tables. Question numbers on common tables refer to the public questionnaire.

Public Release of Survey Findings

All Louis Harris and Associates Inc. surveys are designed to adhere to the code of conduct of the Council of American Survey Research Organizations (CASRO) and the National Council of Public Polls (NCPP). Because data from this survey will be released to the public, any release must stipulate that the complete report is also available rather than simply an excerpt from the survey findings.

Project Responsibility

The directors of this project at Louis Harris and Associates Inc. were Robert Leitman, Executive Vice President and Katherine Binns, Vice President. Louis Harris and Associates gratefully acknowledges the contributions to this project of our colleagues at MetLife. We thank Michael G. Mruz, M.S.W., C.S.W. for his assistance as focus group moderator and consultant, and the public school students and administrators who made the focus groups and in-depth conversations a successful and in portant part of this survey. Responsibility for the survey questions, the findings and their interpretation rests solely with Louis Harris and Associates Inc.

AMERICAN. TEACHER

EXECUTIVE SUMMARY

Public school students and parents are generally satisfied with their public schools. Most believe their school provides a safe and secure environment, as well as a quality education. A majority of students have never been victims of violence and have never been physically hurt while in or around school. However, there are sizable proportions of parents who say their children have at some time been victims of violence that took place in or around school, and nearly equal proportions of students say they have had such an experience during their school lives.

Children and young adults who have experienced violence are more likely to have had other negative experiences in their school life; they are more likely to have failed to achieve academically, to believe their school provides a lesser quality education, and to think their school has problems with vandalism. Students who have been victims of violence are more likely to say their parents have infrequent communications with school, such as individual meetings with teachers, parents' or group meetings, or visits to the school.

Students, in general, have differing views from their parents about their quality of life in public school. Parents are more likely to think that students receive personal attention from teachers, and that students have caring relationships with teachers and their peers. Students who have been victims of violence and those who are at greater risk of becoming victims, are more often critical of their schools and of relations with teachers and other students.

Sizable proportions of children and young adults are hesitant to discuss personal problems and conflicts with teachers or their parents. Students who have been victims of violence and those at greater risk are least likely to discuss such issues. When asked why they do not talk to their parents or teachers more often, many students express doubts about adults' ability to help, or interest in their problems.

Following a recurrent pattern, students who have been victims of violence and those at greater risk of becoming victims are more often critical of adults. For example, almost half (47%) of these students do not talk to their parents about problems or disagreements with other students because they think adults do not understand their problems; one-third (29%) say their parents cannot help, and nearly one in five (17%) say their parents are uninterested or too busy.

More disturbing are the differences in opinion and experience when asked about their school life. Students who have been victims of violence or have been physically hurt while in or around school universally believe that teachers sometimes treat them like numbers. Students who have *never* been victims of violence express clearly different views; none believe that teachers sometimes treat them like numbers.

Students who have been victims of violent incidents are more likely to approach personal relationships with underlying assumptions that increase their vulnerability to confrontations or violence. These students are more likely to distrust and be disrespectful of their peers.

AMERICAN TEACHER

MAJOR FINDINGS

Schoo! Environment

- 1. Parents of public school students and students themselves are generally positive about their schools. Most public school students (78%) and their parents (76%) believe their schools provide an excellent or good education.
 - One-fourth of parents (23%) and one-fifth of students (19%) do not positively assess their school. Older students are also more critical of the quality of education their school provides; 26% of students in grades ten to twelve rate their school as only fair or poor, as compared with 11% of elementary school students (in grades three through six).
 - Those with lower grades, mostly C's, I)'s and F's, are more critical; two in five assess their school negatively as compared with one in ten students with the highest grades.
- 2. A majority of parents and students believe their school provides a safe and secure environment in the school building. However, students are more critical than parents; more than one-third of junior high (36%) and high school students (34%), believe their school does an only fair or poor job of providing a safe environment in the school building.
 - Two in five students believe their school does an only fair or poor job of providing safe and secure school grounds. High school students are more likely to assess their school negatively (52%), while only one in three elementary school students rates his or her school negatively.
 - A plurality (58%) of third to twelfth grade public school students believe their school has, to some measure, a problem with vandalism such as graffiti or broken doors and windows. Only one in three students (36%) says this is not a problem.
 - Students whose school provides an only fair or poor education are more likely to think vandalism is a major or minor problem in their school; only one in four of these students (24%) believes vandalism is not a problem.
 - Nearly half of these parents rate their school as fair or poor on the ability to provide a safe and secure environment in the school building (47%). An equal proportion of parents negatively evaluate their school's physical facilities (47%).
 - 3. A majority (82%) of parents believe that all students complete their assignments when teachers give them homework. In sharp contrast, only 4% of students say that all their peers complete their homework assignments.
 - Students and parents who rate the quality of education their school provides as only fair or poor are *less* likely to believe their school considers infractions of the rules as serious problems. One in five (%) of these parents believes the staff in his or her child's school does *not* act as if breaking the rules is a

- serious problem. Only one-third of these students (32%) think the staff in their school act as if breaking the rules is a very serious problem, and one-fourth (23%) say they act as if it is not a very serious problem.
- 4. Students generally believe that teachers and students get along (78%), very few (3%) think they do not get along well at all. Some students, however, are less optimistic.
 - Students are more likely than parents to think that students and teachers do not get along; 16% compared with 6%; disagreement is greatest between younger students and their parents.
 - Among students who have *not* been victims of violence, 12% say that when students and teachers do not get along it is mainly the students' responsibility, and 73% think it is a joint responsibility. Fewer of those who have been victims of violence think that poor relations are wholly (8%), or partly (68%) a student responsibility.
 - Parents are more optimistic than students about their own relations with teachers. A plurality of parents (67%) positively assess relations between teachers and parents. Students, on the other hand, are more likely to negatively evaluate parent-teacher relations (57%).

Worries and Experiences

- 1. Many parents worry to some extent about their child's safety while in school or going to and from school. Students do not worry to the same extent about their own safety and they often underestimate the extent to which parents worry.
 - Two in five parents of high school students are worried (very or somewhat) about safety, while only 27% of high school students believe their parents worry to that extent.
 - Most students do *not* worry about their own safety going to and from school. However, one in ten students is very worried.
- 2. As with concerns about safety between school and home, students do not think their parents worry about safety in school as much as parents themselves say they do. One in four students thinks his or her parents worry, while two in five parents say they worry very much or somewhat about their child's safety in school.
 - A plurality (65%) of parents believe that vandalism in or around school contributes to their concerns about safety. Students are less worried by such issues; one-third say vandalism makes them worry about their own safety.
- 3. Students and parents alike, who worry about safety in or around school, most often cite weapons as their most serious concern (18% and 16% respectively). This concern is greatest among high school students (20%) and their parents (26%).

- Students with the highest grades (mostly A's and B's) are less likely to cite weapons as their greatest concern (13%), and they more often worry about fights (15%) and about getting beat up (10%).
- Students who have been victims of a violent incident in or around school, as compared with those who have not had such experiences, are more frequently concerned about weapons (19%), and fights (17%).
- 4. In the past month, a sizable proportion of public school students have had personal experiences with angry scenes or confrontations (44%), and physical fights (24%). Students who do not achieve in school (getting mostly C's, D's and F's), and those who have been victims of violent incidents at some time in their school life, are more frequently involved in all types of confrontational behavior.
 - Most students have not experienced more serious incidents such as threats with a knife (81% have had no experiences), or a gun (82% have had no experiences).
 - One in ten (12%) students with generally poor grades and of those who have been victims in the past (11%), have been threatened with a knife at least once in the past month. By contrast, only 4% of students with the highest grades (mostly A's and B's) say they have experienced such threats during the past thirty days.
 - Students who cite vandalism as a problem in their school have experienced more angry scenes and confrontations (four or five on average), and physical fights (an average of three) in the past month. Those who do not believe vandalism is a problem in their school have experienced fewer of these incidents, and are more likely to have had no such experiences.

Impact of Personal Experiences

- 1. Parents and students believe that because of violent incidents, students are likely to distrust one another. Two in five (41%) seventh to twelfth grade students say that because of violence or threat of violence they do not trust other students. More than half of parents (54%) whose child has been the victim of violence say their child does not trust other students.
 - More than half (53%) of all students who have been victims of violence say that because of their experiences and the threat of violence they do not trust other students.
 - One-third (34%) of students who have been victims of violent incidents say that because of their experiences they are less respectful of other students, as compared with 15% of students who have never been victims of violence.
- 2. When asked why they do not talk about their problems in school or disagreements with other students, those who have been victims of violence are more likely to believe their parents cannot help (29%), that adults do not under-

stand their problems (47%), that they will get in trouble (22%), and that their parents are not interested or are too busy to help them (17%).

- When asked, students who have been victims of violence and those at greater risk of being victims are more likely to express concern about relations with their parents. One-fourth of students (25%) say they sometimes wonder if their parents really love them.
- 3. Students who have been victims of violence uniformly believe that sometimes teachers in their school think of their students as numbers. The exact opposite is true among students who have not been victims, none believe that teachers sometimes think of them as numbers; 85% say this is false and 15% are unsure.
- 4. Students who have been victims of violence are more likely than those who have not been to believe the statement "Most people I know say that it's impossible to walk away from an angry scene or confrontation without fighting"; 66% vs. 47%.
 - Students with generally poor grades are most likely to know adults who say it is impossible to walk away from angry scenes or confrontations without a fight (70%) and are more likely to believe that apologies are a sign of weakness (37%).
 - A plurality (57%) of students who view vandalism as a problem state that most people they know think it is impossible to walk away from an angry scene or confrontation as compared with less than half (45%) of students who do not view vandalism as a problem. Children in single parent households (60%) and those whose parents have seven or fewer contacts with school each year (57%), are most likely to agree with this statement.
 - Nearly three-fourths of students who have been victims (72%) think there would be less violence if there were more things for kids to do.

Relations Between Students and Teachers

- 1. Students who have been victims of violent incidents are twice as likely as students who have not been victims to believe that teachers and students do not get along (26% vs. 12%). High school students are most likely to view teacherstudent relations negatively; one in five (19%) thinks students and teachers do not get along (not very or not at all well).
 - One in three (31%) students believe they have received personal attention from a teacher only a few times or hardly ever.
 - As compared with students at lower risk of becoming victims of violence, higher risk students (more than one in four students with generally poor grades [26%] and of students who have been the victims of violence that took place in or around school [25%]) believes they hardly ever get personal attention from teachers.

- One in three students (31%) agrees with the statement that classes in their school are large and teachers have a hard time controlling the classroom.
- 2. Few students talk to teachers about their personal problems or problems at home (22%), or about where they can get help with personal or family problems (13%). Most students do not talk to teachers about problems they may be having with their peers.
 - Students who have been victims of violence are less likely than students who have not been victims to discuss problems with other students or with their teachers (34% vs 42%). In addition, students who attend a school that provides an only fair or poor education less frequently talk to teachers about such problems.
 - Younger students are more likely to discuss fights they have witnessed between students; 51% of third to sixth graders, as compared with 35% of seventh to ninth graders and 37% of high school students.
- 3. Students do not discuss their personal problems with teachers for a wide variety of reasons: because they believe there is no privacy or confidentiality in school (26%), because they feel adults do not understand them (22%), because they think teachers cannot help (20%) and because teachers do not seem interested in or do not have time for their students (24%).
 - Students who are more vulnerable to violence in school and those who have already been victims are most hesitant to talk to teachers. One-third of students with generally poor grades think teachers cannot help, as do 32% of those who have been victims of violence that took place in or around school.
- 4. Only one in five (22%) students would definitely tell a teacher if he or she knew about another student who had carried a weapon, like a knife or gun, to school. Half say it would depend, and one-fifth are not sure if they would tell a teacher or not.
 - More than one-fourth (28%) of students who have been victims of violence or have been physically hurt while in or around school would not tell a teacher if they knew of a student with a weapon.
 - Students who have failed to succeed academically are more likely *not* to tell (34% of those with mostly C's, D's and F's) than are students who have received higher grades (13% of those with mostly A's and B's).
- 5. Nearly half of all students say they would not report a student with a weapon because they are concerned about retaliations, that the student would "get them back." This is only a somewhat greater concern for students who have been victims of violence (50%) as compared with those who have not been (46%).
 - One-fourth of students would not report a student who had a weapon in school because they believe there is no privacy or confidentiality in school.

- As with students who have been victims of violence, those who believe their school provides a lesser quality education or who think their school has a problem with vandalism are more likely to have concerns about confidentiality and their teacher's ability to help.
- One-third (32%) of students whose school provides an only fair or poor education say they would not report students with weapons because there is no privacy in their school.

School Violence and the Surrounding Environment

- 1. Parents and students have considerably different views about how various environmental issues impact their schools. Parents more often view factors such as overcrowded classrooms and the mass media as factors contributing to school violence. Both students and parents believe the use of drugs and alcohol are major contributing factors.
 - A majority of parents (70%) believe vandalism takes valuable resources away from violence prevention while only a minority of students believe this statement is true.
 - When asked about the role the media plays, many parents (71%) believe it contributes to violence in the public schools, but only half of all students concur (51%).
- 2. Parents who worry about their child's safety more often believe that vandalism takes away valuable resources from violence prevention (78% vs. 61%) and that school violence has increased because of a lack of proper supervision at home (80% vs. 68%).
- 3. Students who have been victims of violence and those at greater risk of becoming victims are more likely to believe that factors such as drugs and alcohol, or neighborhood violence affect the level of violence in their school.
 - Two in five (41%) of those who have been victims of violence believe the following statement is true: "Drugs and alcohol are major contributing factors in violent incidents that occur in or around school." In contrast, only one in four (24%) students who has not been a victim of violence believes this statement is true.
 - Students who have been victims of violence (59%) and those with generally lower grades (54%) most often believe that violence in the neighborhood leads to violence in school.

CHAPTER 1: EVALUATION OF SCHOOL

Parents of public school students and students themselves are generally positive about their schools. Most believe their school provides a quality education and a safe environment in which to learn. However, some parents and students hold more critical views. In particular, students whose school experiences have been less positive, such as those who have been victims of violent incidents that took place in or around school, are more likely to believe their school has problems. Likewise, parents whose children have been victims of violence are more likely to negatively assess the quality of education their school provides. Of particular concern to students and parents is their school's ability to provide a safe and secure environment on the school grounds outside the building.

As with teachers in previous surveys in the MetLife series, parents' and students' perceptions of the prevalence of many other educational problems are strongly associated with the quality of education they believe their school provides.

Overall Quality of Education

Most public school students (78%) and parents (76%) believe their school provides an excellent or good education. However, one-fourth of parents (23%) and one-fifth of students (19%) rate their schools as only fair or poor. Parents of high school students (grades ten to twelve) are most discontented; 31% believe their school provides an only fair or poor education. In contrast, only one in five (18%) parents whose child is in elementary school (grades three through six) negatively evaluates his or her school. Older students are also more critical of the quality of education their school provides; 26% of students in grades ten to twelve rate their school as only fair or poor, as compared with 11% of elementary school students (in grades three through six).

Parents who worry about their child's safety and those who are least involved in their child's school, are more likely to believe their school provides an only fair or poor education. One in three (34%) parents who has seven or fewer contacts with 'he school each year, such as individual meetings with staff, telephone conversations, and parents' meetings, rates the quality of education as fair or poor. By contrast, fewer than one-fifth (16%) of parents most involved in their child's school life, with 29 or more contacts each year, assess the education provided in their school as only fair or poor. Similarly, 31% of parents who worry about their child's safety (very or somewhat) rate the quality of education as only fair or poor, while half as many (14%) of those who do not worry about safety (not very or not at all) assess their school as only fair or poor.

Some students are more likely than others to believe their school provides a lesser quality education. One in four students in junior (23%) or senior high (26%) school rates the quality of education he or she receives as only fair or poor. Those with lower grades, mostly C's, D's and F's, are more critical; two in five assess their school negatively as compared with one in ten students with the highest grades. One-third of students who have been victims of violent incidents or have been physically hurt while in school, believe their school provides a lesser quality education.

A majority of parents and students believe their school provides a safe and secure environment in the school building. However, students are more critical than parents; more than one-third of junior high (36%) and high school students (34%), believe their school does an only fair or poor job of providing a safe environment in the school building. While less concerned, a sizable proportion of parents also evaluate their school as only fair or poor (21%). As with older students themselves, parents of adolescents are more likely to be critical; while 86% of elementary school parents assess their school as excellent or very good, a lesser 66% of parents with a child in high school rate their school as highly.

Students and parents disagree about their school's ability to provide a safe environment on the school grounds outside the building. Two in five students believe their school does an only fair or poor job, and high school students are most likely to assess their school negatively (52%). Only one in three elementary school students rates his or her school negatively when it comes to providing a safe environment on the school grounds. While not as critical as students, one-third of parents with a child in junior high (32%) or high school (33%) believe their school does an only fair or poor job of providing a safe and secure environment outside the school building.

Sizable proportions of students and parents assess their school negatively with regard to the school's physical facilities, such as the building and playgrounds. As with other aspects of the school environment, students are more critical than parents, and high school students are most likely to assess their school negatively. Two in five junior high (45%) and high school students (43%) think their school does an only fair or poor job of maintaining the facilities. Parents of adolescents and younger children have similar views about their school's ability to maintain the physical facilities. Roughly one in four parents assesses his or her school's facilities as fair or poor.

A plurality (58%) of third to twelfth grade public school students believe their school has, to some measure, a problem with vandalism such as graffiti or broken doors and windows. Only one in three students (36%) think this is not a problem. Students who attend a school that provides an only fair or poor education are more likely to think vandalism is a major or minor problem in their school; only one in four of these students (24%) believes vandalism is not a problem. Hispanic and African-American students more frequently view vandalism as a major problem, 28% and 27% respectively. By contrast, only 13% of white students believe vandalism is a major problem and 41% think it is not a problem.

OBSERVATION:

Vandalism and deterioration of the physical plant may be symptoms of deficient funding, or a lack of control from the school administration. These problems are particularly alarming in light of the recurring association, discussed throughout this report, between vandalism in the school building and other serious problems, such as greater concernabout safety and a lack of communications among students, teachers, and parents.

Regardless of their home life, a plurality of students believe that vandalism is a problem (major or minor) in their school; this is true for 57% of those living with both parents, 60% of students in single parent households, and 62% of those living in households with other adults such a step-parent, foster parent, or other relative. Students who say their parents have 14 or fewer contacts with school each year, such as personal visits, telephone conversations and meetings, and those whose parents are most involved (with 29 or more school contacts) are somewhat more likely to believe vandalism is a problem in their school.

OBSERVATION: Parents who are most involved are a combination of active parents and of parents who have regular contact because their child has had problems in school. This explains the frequent and sometimes confusing similarity in experience between parents at both ends of the spectrum: those who are least and most often in contact with their child's school.

Parents who believe their school provides an only fair or poor education are more likely to assess the environment in their school negatively. In particular, nearly half of these parents rate their school as only fair or poor on providing a safe and secure environment in the school building (47%), and equal proportions of parents negatively evaluate their school's physical facilities (47%). More than half (56%) of these parents say their school is only fair or poor in providing safe and secure school grounds *outside* the building.

Students in schools that provide a lesser quality education are most critical, more critical than parents. A plurality of these students rate their school only fair or poor on the ability to provide a safe environment inside (54%) or outside the building (70%). Two-thirds of these students say the physical facilities are only fair or poor (61%).

Following the Rules

Parents are more likely than students to believe their school's staff treats infractions of the rales seriously. Two in five parents believe that when rules are broken their school staff acts as if this is a very serious problem. However, one in ten parents (9%) believes his or her school is not very serious about students breaking the rules. Parents of high school students (34%) and high school students themselves (30%) are least likely to think their school acts as if breaking the rules is a very serious problem.

Students and parents who rate the quality of education their school provides as only fair or poor are less likely to believe their school considers infractions of the rules as serious problems. One in five (19%) of these parents believes the staff in his or her child's school does *not* act as if breaking the rules is a serious problem. Only one-third of these students (32%) think the staff in their school acts as if breaking the rules is a very serious problem, and one-fourth (23%) say they act as if it is a not very serious problem.

A majority (82%) of parents believe that all students complete their assignments when teachers give them homework. In sharp contrast, only 4% of students say that all their peers complete their homework assignments. More than one-third of students (37%) think only a minority of students (some or hardly any) complete their homework. Fully two in five (40%) high school students believe only a minority of their peers complete their homework assignments, while nearly *all* parents of high school students (94%) think the majority of students in their child's school complete their homework assignments.

In seeming to care for students, a majority of parents and students assess the teachers in their school as excellent or good. However, as with the general school environment, high school teachers are not rated as highly as elementary school teachers. One-third of students and parents assess high school teachers negatively (fair or poor) when it comes to caring for their students. One in ten high school parents believes that teachers in his or her child's school do a poor job of seeming to care about their students.

Students are less satisfied with their school counselors than they are with their teachers. Older students are most likely to judge counselors harshly. A majority (73%) of seventh to ninth grade students assess them positively in terms of caring for their students, and 7% rate them as "poor." Two in five (38%) high school students (in grades ten through twelve) rate their school counselors negatively, while only 22% rate them "excellent."

Students and parents, in general, are harshly critical of their local school board. A plurality of students (59%) and two in five (43%) parents, negatively assess the effectiveness of the local school board (fair or poor). Fewer than one in twenty (4%) students and only one in six (15%) parents, rates his or her school board as "excellent." Parents of adolescents and high school students themselves are most likely to be critical; a plurality of these parents (54%) and students (67%) assess the competence of the local school board as only fair or poor.

Relations Among Parents, Teachers and Students

Students generally believe that teachers and students get along (78%); very few (3%) think they do not get along well at all. Some students, however, are less optimistic. Students who have been victims of violent incidents are twice as likely to believe that teachers and students do not get along as compared with students who have not been victims (26% vs. 12%). High school students are most likely to view teacher, student relations negatively; one in five (19%) thinks students and teachers do not get along (not very or not at all well).

Parents are more optimistic than students about their own relations with teachers. A plurality of parents (67%) believe relations between teachers and parents are good or excellent. Students are more likely to negatively evaluate parent, teacher relations (57%). Specifically, one in six parents of a high school student thinks relations are excellent, while only one in twenty (5%) high school students agrees.

Some students are more likely to believe relations are not good between teachers and parents. In particular, half of all students whose school provides a lesser quality education say relations between parents and teachers are only fair or poor and fewer than one in ten (7%) believes relations are excellent. Likewise, a majority of students who have been victims of violence or have been physically hurt while in or around school, assess relations negatively. One-third (32%) of students who have been victims say relations between parents and teachers are poor, while only 5% say they are excellent.

CHAPTER 2: WORRIES AND EXPERIENCES

Many parents worry to some extent about their child's safety while in school or going to and from school. Students do not worry to the same extent about their own safety and they often underestimate the extent to which parents worry. Despite their lack of concern, sizable proportions of students have experienced serious conflicts or violent incidents in school. Some students are more likely to become victims of violent incidents: boys and young men, high school students, and students with generally poor grades. A student's home or school life has an impact as well; children and young adults in single parent households, those in other living arrangements, and students who believe their school provides an only fair or poor education are more likely to have been the victims of violence that took place in or around school.

Worries About Violence Going To and From School

In general, students understand the degree to which their parents worry about safety. One in five students thinks his or her parents are very worried about safety going to and from school, while one in four thinks his or her parents are not at all worried. However, high school students think their parents worry less than parents themselves say they do. Two in five parents of high school students worry (very or somewhat) about safety, while only 27% of high school students believe their parents worry to that extent.

Most students do *not* worry about their own safety going to and from school. However, one in ten students is very worried. Parents of high school students believe their children worry more often than students themselves say they do; 28% believe their children worry (very much or somewhat), while only 14% of students themselves say they worry. Elementary school students are most concerned, while only 3% of high school students say they are very worried about their own safety.

A high school student was asked: Do you worry about your personal safety when you are in school or when you are traveling to and from school?

The student's reply: "Yes — I worry more about going to and from school than being at school because of the neighborhood. I feel nervous going from the train station to school and back to the train station."

Worries About Violence in School

As with concerns about safety between school and home, students do not think their parents worry about safety in school as much as parents themselves say they do. One in four students thinks his or her parents worry, while two in five parents say they worry about their child's safety in school. Half of all high school students think their parents are not at all worried about safety in school, but only two in five parents say they are not at all worried.

Unlike concerns about safety outside school, parents generally understand the degree to which their children worry about their own safety in school. High school students, however, do not worry about their own safety in school to the extent to which their parents believe they do; one-tenth (12%) of high school students say they worry, while 22% of parents of high school students think their children worry about safety in school. While a plurality of students do not worry about safety in school, a sizable proportion of students are concerned. One-fifth of public school students in grades three through twelve say they are very or somewhat worried about safety in school. Younger students are more likely to express concern about school safety in the building.

OBSERVATION: Differences between younger and older students may, in part, reflect teens' desires to feel self-confident, self-reliant and in control. Parent's assessment of their teenagers' worries may reflect their concerns more closely than students themselves are willing to admit.

Not surprisingly, parents whose children have been victims of violence or who have been physically hurt in or around school, are more often worried about safety. One in three worries about his or her child's safety in school (35%), and going to and from school (33%). However, students who have themselves been victims are no more worried about safety than are students who have not been victims. One-fourth (26%) of those who have been victims of violence worry about their safety going to and from school, and one-fifth (21%) worry about their safety in school.

A plurality (65%) of parents believe that vandalism in or around school contributes to their concerns about safety. Students are less worried by such issues; one-third say vandalism makes them worry about their own safety. These differences of opinion are greatest between high school students and their parents. While 64% of parents of high school students say vandalism contributes to their concerns about safety, only one in four high school students (25%) expresses such concerns. Younger students are more likely to worry about their own safety because of vandalism they see in school. Elementary school students are as likely to say it makes them worry (38%) as they are to say that vandalism makes no difference to their views or concerns (41%).

Most Serious Worries

Students and parents alike who worry about safety in or around school most often cite weapons as their most serious concern (18% and 16% respectively). This concern is greatest among high school students (20%) and their parents (26%). Parents are more concerned than students about drugs (11%) and gangs (14%). One in ten parents of a high school student says he or she is most worried about drive-by shootings; only 1% of high school students mention drive-by shootings. Parents of elementary school children more often worry about traffic accidents (10%); they are mentioned by very few third to sixth grade students. Traffic accidents are also of

concern to some high school students (5%) and their parents (7%); perhaps because young adults drive to and from school.

Students do not worry about the same types of incidents. Students with the highest grades (mostly A's and B's) are less likely to cite weapons as their greatest concern (13%), and they are more likely to worry about fights (15%) and about getting beat up (10%). Students who have been victims of a violent incident in or around school, as compared with those who have not, are more often concerned about weapons (19%) and fights (17%).

Level of Violence in School

Sizable proportions of parents and students believe that violence in their school has increased in the past year, 17% and 24% respectively. Students and parents are more likely to believe violence has increased than they are to believe that it has decreased. However, one in five students is unsure whether the level of violence has changed. Students in grades ten through twelve are most likely to believe that violence has increased during the past year (30%), while only one in ten of these students (12%) thinks that violence has decreased. Generally, parents are more likely to believe the level of violence in their child's school has stayed about the same; this is true for parents of elementary (66%), junior high (64%), and high school students (60%).

Some students are more likely than others to think violence has increased during the past twelve months. One-third of students whose school provides an only fair or poor education, and of those whose school has a problem with vandalism think violence in their school has increased during the past twelve months. Likewise, 28% of African-American students believe violence has increased in the past year. It is important to note, however, that nearly equal proportions of African-American students think violence in their school has decreased.

OBSERVATION: These beliefs among minority students may be the positive result of increased attention given to violence in inner city schools. As discussed later in this report, minority students have been exposed to anti-violence programs and conflict resolution courses more frequently than white students, and they are generally more optimistic about the impact of such programs.

Table 2-9

CHANGE IN THE LEVEL OF VIOLENCE IN SCHOOL

Personal Experiences

In the past month, a sizable proportion of public school students has had personal experiences with angry scenes or confrontations (44%) and physical fights (24%). Most students have not experienced more serious incidents such as threats with a knife (81% had no experiences) or a gun (82% had no experiences).

These experiences are not the same for all students. Students who do not achieve in school (getting mostly C's, D's and F's), and those who have been victims of violent incidents at some time in their school lives, have been more frequently involved in all types of confrontational behavior. For example, 41% of students with generally poor grades have been involved in at least two angry scenes or confrontations in the past month. Students who have been victims of violence have experienced an average of six angry scenes or confrontations in the past month, as compared with an average of three incidents among students who have never been victims of violence. Similarly, students with generally poor grades have been in more physical fights than their peers; three to four fights on average, as compared with one fight among students with the highest grades (mostly A's and B's).

Students who most often have confrontations or fights, that is those with generally poor grades or those who have been victims of violence, although infrequently, are more likely to say they have been threatened by a knife or gun in the past month. A high school student whose personal experiences have included violent incidents describes a circumstance which may escalate and become a serious incident:

"And they're the type of people that won't argue with you, won't say not a word to you; but instead, like say if we're having a confrontation, right? You know, we're arguing. He ain't gonna say nothin'. He's coming back with a gun. That's how it is these days."

One in ten (12%) students with generally poor grades and of those who have been victims of violence (11%), have been threatened with a knife at least once in the past month. By contrast, only 4% of students with the highest grades (mostly A's and B's) say they have experienced such threats during the past thirty days. While 88% of students with the highest grades have not been threatened with a gun in the past month, a lesser 74% of those with generally poor grades (mostly C's, D's and F's) say they have had no experiences.

Students who attend a school that provides a lesser quality education or who cite vandalism as a problem in their school, are more likely to experience a broad variety of confrontations. Students whose school provides an excellent or good education have been involved in three to four angry scenes or confrontations during the past month. Students whose school provides an only fair or poor education have had five to six angry scenes or confrontations in the past month. In addition, one in ten students whose school provides an only fair or poor education has been threatened with a gun in the past month.

Students who cite vandalism as a problem in their school have experienced more angry scenes and confrontations (four or five on average), and physical fights (ar average of three) in the past month. Those who do not believe vandalism is a problem in their school have experienced fewer of these incidents, and are more likely to have had *no* such experiences. For example, two in five (39%) students who do

not view vandalism as a problem have not experienced angry scenes or confrontations in the past month, as compared with fewer than one in three (29%) students who cite vandalism as a problem in their school.

OBSERVATION: The causal relationship between the prevalence of violence, the quality of education a school provides, and the problems of vandalism is not entirely clear. However, there are clear interrelationships which educators must address when looking at the problem of violence in public schools.

African-American and Hispanic students say they are more often involved in confrontational or violent incidents. A plurality (66%) of white students have not been in a physical fight in the past month, as compared with 37% of African-American and 49% of Hispanic students. More than one-fourth (28%) of African-American students do not know how many physical fights they have been involved in during the past month. African-American students (11%) are twice as likely to say they have been threatened by a gun at least once in the past thirty days as Hispanic (5%) or white (4%) students.

Boys and young men are more likely to be involved in angry or violent incidents. They had an average of five angry scenes and confrontations, and two or three physical fights in the past month. Girls and young women had three confrontations and one physical fight, on average, during that same period. Girls and young women are less likely to have been threatened with a gun; 3% say they have been threatened at least in the past month as compared with 8% of boys and young men.

Students from single parent households or in living arrangements with other adults (such as step-parents, foster parents or other relatives), are more likely than students who live in two parent households to have experienced serious incidents. Children and young adults in single parent households had four or five angry scenes or confrontations in school while students from dual parent households were involved in an average of three incidents in the past month. Nearly one in ten (9%) students from single parent households claims to have has been threatened by a gun at least once in the past month, as compared with 3% of students who live with both parents.

Students who say their parents are most often in contact with school more frequently experience angry scenes and confrontations. Students whose parents have at least 29 contacts with school each year have been in involved in six to seven angry confrontations in the past month. Only one in four of these students (26%) has not had a confrontation during the past thirty days, as compared with at *least* one in three students whose parents have less frequent contact with school.

OBSERVATION: These findings support the association noted earlier between very frequent parental contact with school, and students who have had problems in school. This may explain why students whose parents are most frequently in contact with school often have more in common with students whose parents have only minimal contact.

One in five (21%) parents says his or her child has, at some time, been the victim of a violent incident that occurred in or around school. One in six (16%) students says he or she has been the victim of a violent incident that took place in or around school. As might be expected, older students are more likely to have had such experiences.

Students who say they have been victims of violence that took place in or around school have experienced a wide variety of violent events. Most common are fights (17%), being pushed, shoved, grabbed or slapped (10%), being kicked, bit or hit with a fist (7%), and threats or intimidation (7%). Older students, in grades ten to twelve, are more likely to have been in fights (22%) and to have been threatened or intimidated (10%). They are also more frequently involved in traumatic or potentially fatal confrontations; one in twenty (6%) claims to have been assaulted with knife or gun, or beaten by a group or gang (4%).

Students whose school provides an only fair or poor education are more frequently the victims of fights (20%), assaults with weapons (7%) and other objects (4%). African-American students and white students who have been victims of violence have experienced different types of violence. For example, fewer African-American students (3%) have been hurt because of kicking, biting or punching, as compared with white students (9%), but they are somewhat more likely to have been assaulted with a knife or gun (6%) than their white (3%) peers.

Boys and young men are more often victims of such violent incidents than are girls and young women. Girls and young women most often cite being pushed, shoved, grabbed or slapped (17%) while boys most often mention fights (20%). Girls and young women are more than twice as likely to mention threats and intimidation (11% vs 4%), while boys and young men more often cite assaults with a weapon (5% vs 2% of girls).

Attention Following a Violent Incident

One in five students who have been victims of violent incidents or have been physically hurt while in or around school, required medical attention because of that experience. High school students, perhaps because of greater potential for conflicts to escalate, are more likely to require medical attention. While parents and students generally agree about when medical attention is required, parents are more likely to believe their child needs counseling or therapy as result of a violent incident that occurred in or around school. One in five parents whose child was a victim of violence says his or her child needed counseling. Though still a sizable proportion, fewer (13%) students believe they were in need of such counseling. While parents of high school students are most likely to think their child needs counseling, high school students who have themselves been victims are *least* likely to think they needs such help (10%).

Students who have been victims of violence and have felt that they required some kind of counseling or assistance, do not always receive equal follow up and attention. Students who assess the education their school provides as only fair or poor are more likely (24%) to say they needed and were unable to get counseling after their experience. Similarly, students who perceive vandalism as a problem in their school are twice as likely to have gone without the counseling they believed they needed, 21% compared with 9% of students who say vandalism is not a problem in their school.

OBSERVATION: As seen earlier, students' concerns about the quality of education in their school and the physical upkeep of their school building are strongly associated with their experiences as victims of violence in school. As with communities as a whole, deterioration of the physical surroundings may be an indicator of other more pressing problems, such as higher levels of violence and an inability to effectively care for victims as well as perpetrators of violence. As discussed later, in greater detail, a student who has been the victim of a violent incident in or around school has very different relationships with others and perceives his or her school life differently.

Among those who have been victims of violence, girls and young women are more likely (22%) to say the needed counseling and were unable to get it, while boys and young men are more likely to believe they did not need counseling (71%). In addition, students whose parents are least involved with school (seven or fewer contacts per year), or are most often in communication with school (29 or more contacts per year) are most likely to say they were unable to receive the counseling they thought they needed.

Students Who Have Been Victims of Violence

Some students are at greater risk than others of being hurt in school, or of becoming the victims of a violent incident. As compared with students who have had no violent experiences, boys and young men (57% vs. 47%) are more likely to be victims. Students with lower grades are twice as likely to be victims of violence (20% vs. 10%). Students who experience physical harm or violence while in or around school are more likely to be junior high (35% vs. 29%) or high school students (38% vs. 23%). They are more likely to attend a school that provides a lesser quality education (33%) vs. 13%), or a school that has problems with vandalism (67% vs. 55%). However, students who have been victims of violent incidents in or around school are not more likely to attend urban public schools, and only somewhat higher proportions are minorities (24% vs. 19%). Victims of violence more often live in single parent households or with others, such as step-parents, foster parents, or other relatives.

OBSERVATION: Children and young adults who are at greater risk of becoming victims of violence and those who have already experienced violence are more closely involved in confrontations at every level, as a witness or participant. These students often display attitudes and behaviors that place them at greater risk of experiencing violence, including such behavior as a lack of trust in others and a lack of respect for their peers.

Taking Steps to Avoid Violence

Whether they have been hurt in the past or not, a great many (44%) students take deliberate steps to avoid being hurt when they are in or around school. Parents have an accurate general understanding of the extent to which children and young adults modify their own behavior in order to avoid violence. However, high school students themselves say they take deliberate steps less often than parents think they do, 37% vs 45%. Considerable proportions (20%) of students could not say whether they deliberately change their behavior in order to avoid violence.

Parents and students both say that children and young adults are most likely to avoid talking to or spending time with certain students, 26% and 31% respectively. One in three (28%) students says he or she does not go to certain streets or neighborhoods when going to or from school. Further, one in four (24%) students says he or she makes sure to walk through certain neighborhoods only in the company of others. Parents are half as likely to think their child completely avoids particular neighborhoods and none mention that their child only walks through certain neighborhoods with others. A high school student comments on the steps (s/he) takes in order to avoid violence:

"You don't take no short cuts. You walk the long way. You walk with a crowd. You don't walk by yourself. You cannot avoid violence. Violence finds you."

Conversely, one-fifth of parents think their children talk to teachers, administrators and school staff as a way to avoid becoming a victim of violence. No students mention this measure as a step they take in order to be safe in or around school. Other steps mentioned by seventh to twelfth grade students include: keeping to themselves (10%), staying with friends (4%) and displaying a nice or friendly attitude (4%). Younger students, in grades seven to nine, are more likely to walk away from confrontations (17%) than are their older peers in high school (11%).

The Impact of Personal Experiences

Parents are more likely to believe that children and young adults will be adversely affected by their experiences with violence. Though only a minority have had problems, it is alarming that children have felt negative repercussions because of their experiences with violence. Parents and students both believe that because of such incidents students are likely to distrust one another. More than half of parents (54%) whose children have been the victims of violence and two in five (41%) seventh to twelfth grade students say that because of violence or threat of violence they (or their children) do not trust other students. Many students and parents say that because of violence in or around school, they (or their children) are less respectful of other students, 22% and 33% respectively. One in three parents whose child has been the victim of school violence believes that when his or her child was physically hurt by someone else he or she did not want to talk about what happened.

The Impact on High Risk Students as Compared With Others

Students who are at greater risk of becoming victims of violence and those who have had experiences with violence, are more likely than other students to experience negative repercussions because of a fear of violence. Sizable proportions of students who have been victims, of those with generally lower grades or who attend a school that provides a lesser quality education, exhibit types of behavior and concerns that further increase the potential for conflict. A lack of trust and disrespect of others may leave a student more vulnerable and may increase the possibility that he or she will overreact or misjudge disagreements and conflicts with other students.

Students generally (88%) do not believe that their experiences with violence have affected their grades. However, students who evaluate the quality of education they receive as only fair or poor are twice as likely to believe their grades have been affected as students whose school provides an excellent or good education (11% vs. 5%). Eight percent of students whose school has a problem with vandalism believe that concerns about violence or the threat of violence have affected their grades. By contrast, only 3% of students who say vandalism is not a problem in their school believe this statement is true.

One-third (34%) of students who have been victims of violent incidents say that because of their experiences they are less respectful of other students, as compared with 15% of students who have never been victims of violence. Likewise, students who say their school has a problem with vandalism more often agree with this statement; 27% as contrasted with 13% of students who do not think vandalism is a problem. Young adults who believe their school provides an only fair or poor education more often agree with this statement than students who positively evaluate the education they receive.

More than half (53%) of all students who have been victims of violence say that because of their experiences and the threat of violence they do not trust other students. Similar proportions of students with generally poor grades (50%) and of those whose school provides an only fair or poor education (55%), believe this statement is true: "I do not trust other students."

High risk students and those who have already been victims of violence are also more likely to agree with the statement: "When I have been physically hurt by someone else I have not wanted to talk about what happened." One in four students with generally poor grades (25%) believes this statement is true, as contrasted with one in ten students with very good grades (12%). Likewise, those who have been victims of violent incidents are more likely than those who have not to believe this statement is true for them, 22% vs 13%.

CHAPTER 3: PARENTS RELATIONS WITH THEIR CHILDREN AND SCHOOL

Many parents of school age children believe that a majority of their peers fail to live up to their responsibilities as parents. Parents who are least involved in their child's school life, through school events, meetings or individual conversations with school staff, are most critical of their peers. In particular, with regard to disciplining children and motivating them to want to learn in school. A majority of parents believe, as well, that most of their peers fail to show respect for teachers.

Despite these criticisms, parents often say they are personally involved in school life. Students do not agree; they are more likely to think their parents have only minimal communications with school and that many parents never take part in activities such as parents' meetings and individual discussions with teachers or other school staff. Likewise, children and young adults say they confide in their parents less often than parents believe. In particular, students hesitate to discuss personal problems with their parents because they doubt their parents' ability to help, or believe their parents are not interested or do not have time.

Parental Responsibilities

More than half of parents believe that a majority of their peers leave their children alone too much after school (56%) and fail to discipline their children (55%). Nearly as many believe that a majority of parents take too little interest in their children's education (47%) and fail to motivate their children to want to learn in school (46%).

African-American, Hispanic, and younger parents are harshest in their judgement of their peers. One in four African-American parents (26%), and of those under the age of thirty (23%), thinks most parents take too little interest in their children's education. By contrast, a lesser 15% of parents forty years old or older, and 14% of white parents believe this is true for most parents.

Similarly, one in four parents under the age of thirty (24%), African-American (26%), and Hispanic (23%) parents believe that most parents leave their children alone too much after school. These same parents are more likely to think most of their peers fail to motivate their children to want to learn in school. Specifically, 22% of parents under the age of thirty believe this is true of most parents, as compared with 15% of parents who are forty years of age or older. As compared to older parents, younger parents are more likely to believe most of their peers fail to discipline their children, 34% vs 19% of those forty and older. Regardless of their age, race, or ethnicity, only small proportions of parents believe these criticisms apply to only a few of their peers. For example, 14% believe only a few parents leave their children alone too much after school, or fail to discipline their children.

Parents who negatively assess the quality of ducation their child's school provides, those who worry about their child's safety, and those who are least involved in school are more likely to assess their peers negatively. Roughly one in four parents who believes his or her child's school provides an only fair or poor education thinks most parents leave their children alone too often after school (27%), take too little interest in their children's education (23%), and fail to motivate their children to want to learn in school (22%). One-third (31%) of these same parents think most of their peers fail to discipline their children. By contrast, only 14% of parents who assess their school's education as good or excellent believe that most parents take too little interest in their children's education, and only 15% think most parents fail to motivate their children to want to learn in school.

OBSERVATION:

These disparities may reflect the opinion that a school's inability to provide a good education is, in part, the result of parental failure to become involved in school and failure by parents to take responsibility for their children's behavior.

The extent to which parents are in contact with school, through individual communications, notes, and parents' meetings, often impacts parents' opinions of their peers. One-fifth of parents who say they have 22 or more contacts with their child's school each year believe most other parents take too little interest in their children's education. Parents who worry about their child's safety are twice as likely (20%) as those who do not worry (11%) to believe this is true of most parents.

Parents who have more contacts with their child's school are somewhat more likely to think other parents fail to motivate their children to want to learn in school. Half (49%) of parents who say they have 29 or more contacts with their child's school each year believe this is true for a majority of their peers, as compared with 44% of parents who have seven or fewer contacts with the school.

Relations Between Children and Their Parents

Students and parents have considerably different views about the extent to which they believe children and adolescents talk to their parents about problems they have with other students. While few parents (13%) think their children hardly ever or never talk to them about problems or disagreements they have had in school, more than one-third (37%) of students say they hardly ever or never speak to their parents about such things. This is most common among high school students; 43% say they hardly ever or never talk to their parents about problems or disagreements with other students. Though parents are overly optimistic about the extent to which their children talk to them, they do agree with students that younger children are more likely than adolescents to discuss such issues with their parents.

When young children and teens hesitate to speak to their parents about problems they have with school or with other students it is most often because they prefer to talk with friends (55%). However, sizable proportions of children and young adults hesitate to discuss such problems with their parents because they think adults do not understand their problems (36%) or that their parents cannot help (23%). More than one in ten students (12%) thinks his or her parents are not interested in their problems or are too busy to listen.

A high school student was asked: What kinds of things do you think parents can do to make their children's schools safer?

The student's answer: "You know, they should teach their kids to squash-it...not get crazy and start fights."

Students at greater risk of being victims of violence most often have skeptical opinions about their parents and adults in general. While one-third (33%) of students with very good grades (who do not always talk to their parents) believe that adults do not understand their problems, nearly half (46%) of students with generally poor grades think this is true. Similarly, one in three (31%) students with a generally poor grades believes his or her parents cannot help, as compared with one in five (21%) students with the highest grades (mostly A's and B's).

Boys and young men, and children who live in single parent households are also less likely to discuss problems with their parents because of skepticism about adults' abilities or willingness to help. For example, one-fourth of children of single parent households (26%) believe their parents cannot help. Students in other living arrangements, such as living with a step-parent, foster parent or other relative, are more likely to believe that parents or adults cannot help, or will not understand their problems.

Most disturbing are the differences between students who have and have not been victims of violence. When asked why they do not talk about their problems in school or disagreements with other students, those who have been victims are more likely to believe their parents cannot help (29%), that adults do not understand their problems (47%), that they will get in trouble (22%), and that their parents are not interested or are too busy to help them (17%).

Concern About Parental Love

When asked, students who have been victims of violence and those at greater risk of being victims are more likely to express concern about relations with their parents. One-fourth of students (25%) say they sometimes wonder if their parents really love them. This is most frequent among those who have been victims of violence or have been physically hurt while in or around school (31%), and among students with generally poor grades (32%). Similar disparities exist between students who live with both parents and those who live in other arrangements.

Minority students are more concerned than white students. One-third of African-American (32%), and Hispanic (34%) students say this statement is true for them, as compared with one in five white students (22%).

Students whose parents are most often in contact with school and those who say their parents have seven or fewer contacts each year more often worry about whether their parents really love them. A lesser 15% of students who say their parents are in communication with school on a fairly regular basis (22 to 28 contacts) sometimes wonder if their parents really love them, as contrasted with 29% of students whose parents have seven or fewer contacts and 27% of those whose parents are most often in contact with school.

Parental Involvement in School Activities

Parents say they are involved in their child's school life to a greater extent than students believe. At least half of all students believe their parents never exchange notes with a teacher or school official (58%), and never attend meetings of parents' groups such as the PTA (51%). In contrast, fewer than one-third of parents say they never have these kinds of contacts. Likewise, while 46% of students believe their parents never go to school to hear about and discuss school issues and see the school environment, only one in ten parents claims to never attend such meetings. Fully one in five students believes his or her parents never meet in person with teachers or other school officials, and one-third of students think their parents never talk to teachers and school officials on the telephone.

High school students are most likely to believe their parents do not participate in school activities or make contact with school staff. Fully two-thirds (65%) of tenth to twelfth grade students say their parents never attend parents' groups or meetings to discuss school issues and see the school environment. By comparison, only 14% of parents with a child in high school say they never attend meetings where school issues are discussed.

Students who have been victims of violence and those who are at greater risk are more likely to say their parents never attend school events, or only attend once a year. More than half of students who have been victims of violence say their parents meet individually with school staff or teachers only once a year (26%) or never (27%). One in three students with generally poor grades says his or her parents never meet with school staff on an individual basis, and only 14% say they do so more than three times a year. A nearly equal proportion (28%) of students who receive an only fair or poor education say their parents never meet individually with school staff.

Most parents do not talk to teachers or school staff by telephone more than once a year. However, parents whose child has been a victim of violence or who is at greater risk of becoming a victim are even less likely to have such contact. Two in five (39%) students who have been victims of violence say their parents never talk to school staff by telephone. This is true regardless of any problems a student may be having academically, and whether or not they believe their school provides a good or lesser quality education.

Likewise, a majority of students who have been victims of violence or who have been physically hurt while in or around school (63%), say their parents have never exchanged notes with school staff. Only one in ten believes his or her parents have had such contact once a year. These low levels of communications with school staff are consistent whether students have generally good or poor grades and regardless of how students evaluate the quality of education their school provides.

OBSERVATION:

Even if parents are actually more involved than students believe, students' understanding is key to their overall confidence and perception of parental support. These findings show that students who have been victims of violence and those at greater risk are more likely to believe their parents are uninterested and uninvolved in their school life.

These disparities between students and parents are reflected in their opinions about the level of support parents show for their school. A majority (70%) of parents believe their peers are excellent or good in terms of the level of support they have shown. Students, on the hand, are more skeptical; more than one-third (37%) believe parents do a fair or poor job of showing support for their school. This sentiment is most common among high school students; 50% say parents do a fair or poor job, and only 11% think parents are excellent in this regard.

More than one-fourth of students, when asked, wish their parents were more involved in their school work. Younger students (34%), those with generally poor grades (32%), students in single parent households (33%) or those living with other adults, such as step-parents, guardians or other family members (31%), are more likely to agree with this statement. Hispanic students (34%) more often than African-American (30%) or white students (28%) believe this statement is true.

Parent Relations with Teachers

One-third of parents think the majority of their peers fail to show respect for teachers. Younger parents and African-American parents are harshest in their judgement; one in five (21% and 20% respectively) believes most parents fail to show respect for teachers. By contrast, only one in ten parents age forty or older, and of Hispanic or white parents believes this is true for most parents.

Parents who negatively assess the quality of education their child's school provides and those who worry about their child's safety in or around school, are more often critical of their peers. Two in five parents who say their school provides an only fair or poor education believe a majority of parents fail to show respect for teachers while one-fifth (22%) think this is true for only a few parents. By contrast, parents who assess the quality of education as excellent or good are equally likely to say this is true for only a few parents (33%) or for a majority of parents (30%). Seven in ten parents who do not worry about their child's safety in or around school (71%) think a minority of parents fail to show respect for teachers as compared with a lesser 62% of parents who worry about their child's safety.

While most parents have no concerns about approaching teachers to talk to them, nearly one in five (17%) feels awkward or reluctant. More than one in four parents under the age of thirty feels this way (26%), as compared with one in six of those forty years old or older. Parents who assess the quality of education in their school as only fair or poor and those who worry about their child's safety, are also more likely to feel awkward about approaching a teacher.

SHOWING RESPECT FOR TEACHERS

QUESTION: Let me ask you about some criticisms that are sometimes made of parents. How many parents do you think....

Fail to show respect for teachers — most, many, some, or only a few?

CHAPTER 4: RELATIONS BETWEEN STUDENTS AND TEACHERS

Parents, unfortunately, are overly optimistic in their views of student-teacher relations. While parents generally believe students and teachers get along, students are divided in their opinions. In particular, students who are at greater risk of becoming victims of violence or who have been victims are more likely to believe teachers and students do not get along. In addition, many students believe they rarely receive personal attention from teachers, and they often feel that they are treated like numbers. Most alarming are the views of students who have been victims of violence in or around school; they universally believe that teachers sometimes treat them like numbers.

Responsibility for Relations Between Students and Teachers

As with their own relationships with teachers, parents are more optimistic about how well teachers and students get along. Students are more likely than parents to think that students and teachers do not get along; 16% compared with 6%. Disagreement is greatest between younger students and their parents. While 15% of elementary school students think teachers and students in their school do not get along, only 4% of parents of an elementary school child believe this is true. Fully 96% of parents of elementary school students think students and teachers in their school get along. High school students and their parents are both less likely to think teachers and students get along. However, as with parents in general, those who have a child in high school are more optimistic than high school students themselves.

Responsibility for Poor Relations

Higher risk students, including those who fail to achieve academically and those who have been victims of violence, are less likely to believe that students are wholly or partially responsible for poor relations between teachers and students. Among students who have *not* been victims of violence, 12% say that when students and teachers do not get along it is mainly the students' responsibility, and 73% think it is a joint responsibility. Fewer of those who have been victims of violence think that poor relations are wholly (8%), or partly (68%) a student's responsibility. Students who have been victims of violence are more likely to believe teachers alone, or school administrators, are responsible. Similar disparities of opinion exist between students with generally poor grades and those who succeed academically.

Personal Attention From Teachers

It is discouraging to note that one in three (31%) students believes he or she has received personal attention from a teacher only a few times or hardly ever. Students at greater risk of becoming victims of violence in or around school are more likely to say they rarely receive personal attention from teachers. More than one-fourth

of students with generally poor grades (26%) and of students who have been the victims of violence that took place in or around school (25%), believe they hardly ever get personal attention from teachers. Fewer than one-tenth (7%) of these students say they receive personal attention all of the time, as compared with 14% of students who have not been victims and of those who have succeeded academically (getting mostly A's and B's). Children and young adults who have experienced violence personally and those who are at greater risk of becoming victims are harsher in their judgements about relations between students and teachers. This includes students who negatively evaluate the quality of education their school provides, those who have failed to achieve academic success, boys and young men, and students who think their school has a problem with vandalism.

One in four students whose school provides a lesser quality education (24%) says he or she hardly ever receives personal attention from teachers, while only one in ten receives attention all the time. In comparison, students whose school provides an excellent or good education are less likely (13%) to believe they hardly ever receive personal attention from teachers. Boys and young men (18%) are more likely to think they hardly ever receive personal attention from teachers, as are students whose parents have minimal contact with school (19%).

One in three students (31%) agrees with the statement that classes in their school are large and teachers have a hard time controlling the classroom. Fully two in five students whose school provides an only fair or poor education believe this is true, as compared with fewer than one-third (28%) of those who receive an excellent or good education. Students who think of vandalism as a problem in their school (36%) are more likely to believe this is true in their school, as are students who have been victims of violence or have been physically hurt while in or around school (41%).

Students who have been victims of violence uniformly believe that sometimes teachers in their school think of their students as numbers. The exact opposite is true among students who have not been victims, none believe that teachers sometimes think of them as numbers; 85% say this is false and 15% are unsure. Students with generally poor grades (45%), and high school students (39%) are more likely to say that teachers treat them as numbers than those who have succeeded academically (getting mostly A's and B's), and their younger peers.

As with teachers' capacity to provide personal attention to students and maintain control of the classroom, students whose school provides an only fair or poor education are more likely to think that students are sometimes treated like numbers. Problems with vandalism also increases the likelihood that students will believe teachers treat them like numbers; one-third of students who say vandalism is a problem in their school believe this statement is true, as compared to one-fifth (22%) of students whose school does not have problems with vandalism.

One-third of boys and young men (32%), of students from single parent house-holds (30%), and of those who live with other adults such a step-parents, other relatives or foster parents (31%) think their teachers treat them like numbers. By contrast, one-fourth of girls and young women (23%), and of children who live with both parents (26%) believe this statement is true.

Communications Between Students and Teachers

When asked about subjects they might discuss with teachers outside of class, students most often mention personal interests and hobbies (57%), movies, television and music (56%), and plans for after high school (53%). Two in five say they discuss current affairs (43%), their problems with other students (40%), and fights they have seen between other students (42%). Fewer students talk to teachers about their personal problems or problems at home (22%), or about where they can get help with personal or family problems (13%).

Whether or not they have succeeded academically, or been the victim of a violent incident, roughly one in five students has discussed personal problems with his or her teacher. Some students do not have personal relationships with teachers as often as others. Girls and young women (25%) discuss such problems with their teachers more frequently than boys and young men (19%). One-fifth of students who say their parents have 21 or fewer contacts with school each year have talked about personal problems with a teacher, as contrasted with one-third of students who say their parents have 22 or more contacts, and two in five students whose parents have 29 or more school contacts in each year. Even though they believe they do not receive adequate personal attention from teachers, students from single parent households (28%) or who live with other adults such as a step-parent, foster parent or other relative (30%), are more likely to talk to a teacher about personal problems than are students who live with both parents (18%).

OBSERVATION: It may be that students from single parent and other types of households, other than dual parent households, may talk to teachers about their personal problems more often because they are more reliant on other adults such as their teachers. Despite more frequent dialogues, these students may feel that they need more attention than they currently receive.

Most students do not talk to teachers about problems they may be having with their peers. Unlike personal problems or problems at home, students who have been victims of violence are less likely than students who have not been victims to discuss these types of problems with their teachers (34% vs 42%). In addition, students who attend a school that provides an only fair or poor education less frequently talk to teachers about such problems.

Students with generally good grades are more likely to talk to teachers about their problems with other students, as are younger students. One-half of elementary school students say they talk about such issues with their teachers, as contrasted with one in three middle school (31%) and high school (29%) students. Likewise, students whose parents are most involved in school talk to teachers more often about such problems. Three in five students (62%) who say their parents have 22 to 28 contacts with school each year, and half (52%) of those whose parents have 29 or more contacts, talk with their teachers about problems with other students.

Younger students are more likely to discuss fights they have witnessed between students, 51% of third to sixth graders, as compared with 35% of seventh to ninth

111 101

graders and 37% of high school students. Students who believe their school provides a good or excellent education, and those who say their parents are often in communication with school, are most likely to tell their teachers about fights they have seen in school. Two-thirds (66%) of students whose parents have 22 to 28 school contacts each year talk to their teachers about such events, as compared with 37% of students whose parents have minimal contacts with school (seven or fewer per year).

Reasons for Not Talking to Teachers

Students do not discuss their personal problems with teachers for a wide variety of reasons. Just as with their parents, students do not talk to teachers because they are skeptical of teachers' abilities or interest in helping. They most often mention, as they did when asked about why they do not talk to their parents, that they prefer to discuss their personal problems with friends (53%). One in three students prefers to discuss his or her problems with a family member rather than a teacher. Students do not talk to teachers because they believe there is no privacy or confidentiality in school (26%), because adults do not understand them (22%), because they think teachers cannot help (20%) and because teachers do not seem interested in or do not have time for their students (24%).

Students who are more vulnerable to violence in school and those who have already been victims are most hesitant to talk to teachers. One-third of students with generally poor grades think teachers cannot help, as do 32% of those who have been victims of violence that took place in or around school. These students are also more likely to believe there is no privacy or confidentiality in school (30% and 40% respectively), and that teachers are not interested in students' problems (34% and 43% respectively). In comparison, only one in five (21%) students with good grades or who have *not* been victims (17%) believe that teachers do not seem interested in students' problems.

Students who believe their school has a problem with vandalism and those who think their school provides an only fair or poor education are more likely to be critical of teachers. One-third of students who receive an only fair or poor education say they do not talk to teachers about their problems with other students because there is no privacy or confidentiality in school. Nearly equal proportions believe teachers cannot help (29%), or that they do not seem interested in or do not have time for their students (39%). All these criticisms are mentioned less frequently by students who receive an excellent or good education. For example, just 18% of these students believe teachers cannot help them with their problems with other students.

Similar disparities of opinion are true for students who think vandalism is a problem in their school and those who do not. Specifically, over one-fourth (27%) of those who view vandalism as a problem in their school believe that teachers do not seem interested in students or do not have time; fewer (20%) of those who do not consider vandalism a problem think teachers are uninterested in their students. Similarly, students who believe that vandalism is a problem in their school are more likely to cite a lack confidentiality or privacy as reason for why they do not talk to teachers (29%), as compared with students who do not view vandalism as a problem in their school (21%).

Reporting Weapons and Violent Incidents

Only one in five (22%) students would definitely tell a teacher if he or she knew about another student who had carried a weapon, like a knife or gun, to school. Half say it would depend, and one-fifth are sure they would *not* tell a teacher. More than one-fourth (28%) of students who have been victims of violence or have been physically hurt while in or around school, would not tell a teacher if they knew of a student with a weapon. Similarly, students who fail to succeed academically are more likely *not* to tell (34% of those with mostly C's, D's and F's) than are students who receive higher grades (13% of those with mostly A's and B's). Older students, who are more likely to witness violent incidents and have more often been victims themselves, are less likely to tell a teacher when they know about a student who has carried a weapon to school.

As with their own personal problems, students whose school provides a lesser quality education are less likely to tell a teacher about a student who has carried a weapon to school; 14% would definitely tell, while 29% are sure they would not tell. Opinion among students who receive an excellent or good education is nearly reversed; 25% would definitely tell their teacher while 15% are sure they would not tell.

Minorities, boys and young men, and those in single parent households are more hesitant to report a student with a weapon. For example, one in three African-American students (29%), and roughly one in four boys and young men is sure he or she would *not* report a student who has carried a weapon to school. Fewer white students (18%) and girls and young women (14%) would not tell a teacher.

Students whose parents are least often in contact with school (seven or fewer contacts each year) and those most frequently in contact (29 or more contacts per year), are least likely to tell a teacher about a student who has carried a weapon to school; roughly one in four says he or she would certainly not tell.

OBSERVATION:

Students who have been victims of violence, or have less positive school experiences, express lower levels of confidence in adults generally. They are less likely to have personal relationships with their teachers and are less connected with their school environment. These same students are more likely to refrain from reporting another student who has carried a weapon to school.

REPORTING A STUDENT WITH A KNIFE OR GUN

Reasons for Not Reporting Incidents to Teachers

Nearly half of all students say they would not report a student with a weapon because they are concerned about retaliations: that the student would "get them back." This is only of somewhat greater concern for students who have been victims of violence (50%) as compared with those who have not been (46%). One-fourth of students would not report a student who had carried a weapon in school because they believe there is no privacy or confidentiality in school. This is of greater concern to those who have been victims of violence (35%) than for students who have not been victims (19%). One in three students says he or she would prefer to tell a friend, and one in five would prefer to speak with a guidance counselor or principal rather than a teacher.

When asked why they would not tell a teacher about threats made by another student, with a knife or gun, students most often cite a fear of retaliation (39%), that they prefer to tell a friend (30%) or school staff such as counselors or administrators (21%), or that there is no privacy or confidentiality in school (20%). Once again, concern about a lack of privacy is more frequent among students who have been victims of violence. Two high school students comment on why they would prefer to discuss confrontations with a counselor rather than a teacher:

"...because you get more attached to a guidance counselor than to a principal or a teacher."

"The guidance counselors talk to you, you know? You let them know what's on your mind. They help you out...so you could relate a little better..."

These same reasons are mentioned most often by students when asked why they would not tell a teacher about physical violence they may witness between students. As with threats made with a weapon, students who have been victims of violence are more concerned about a lack of privacy or confidentiality in school (24%) than are students who have not been victims. These students are also more likely to say they will not report physically violent incidents because they think teachers do not seem interested or do not have time for these problems (18%).

As with students who have been victims of violence, those who receive a lesser quality education or who think their school has a problem with vandalism, are more likely to have concerns about confidentiality and about their teacher's ability to help. One-third (32%) of those who receive an only fair or poor education say they would not report students with weapons because there is no privacy in their school. Likewise, these students less frequently report students who make threats with weapons because they think there is no privacy or confidentiality (31%), or because they believe teachers cannot do anything about it (17%). Students who believe their school has vandalism problems, as compared with students who say their school has no such problems, are more likely to say that teachers cannot do anything about students who make threats with weapons, 15% vs. 10%. They are also more likely to say they do not tell teachers about physically violent events because their school lacks privacy or confidentiality, 21% vs. 13%.

CHAPTER 5: ATTITUDES TOWARD CONFLICT AND VIOLENCE PREVENTION

Definitions of Viclence

Parents, in general, are more likely than students to define particular types of incidents as violent. Specifically, a plurality of parents believe that verbal insults, threats to students, threats to teachers, and stealing are violent incidents. Students are less likely to consider these as violent events. Parents of younger and older children, and students of all ages, are in general agreement about which events they consider violence. For instance, one in three students in elementary, junior high, and high school thinks of verbal insults as violence. Similarly, nine in ten parents think of pushing, shoving, grabbing or slapping as violent events.

One disturbing difference between parents and school students relates to their opinions about the threat or use of weapons. While parents are in nearly universal agreement that using knives or firing guns (98%) or threatening someone with a weapon (99%) are violent incidents, a lesser proportion of students consider these events as violence (93% and 92% respectively). One high school student describes violence this way:

"Violence is poor behavior. You're either hurting yourself...or somebody's hurting you...hurting, wounding."

Students who are at greater risk of being victims of violence, including those attending a school that provides a lesser quality education and those who say their parents have less frequent contact with school, are less likely to define various incidents as violent. In particular, less than two-thirds (63%) of students who receive a lesser quality education think that threats to teachers are violent incidents, as contrasted with 70% of students who receive an excellent or good education. Likewise, 29% of students who say their parents are least often in contact with school believe that verbal insults can be violent incidents, while 44% of those students whose parents most often communicate with school view verbal insults as violence. These students are also less likely to believe that pushing, shoving, grabbing and slapping (81%), threats with a weapon (92%), and the use of weapons such as knives or guns (91%) should be considered violent incidents.

Responsibility for Reducing Violence

A majority of students believe that all parties involved in the educational experience, teachers, students, parents, counselors, administrators and school board members, should help stop or reduce violence in public schools. A majority of students also think the police should be involved (68%).

Students at greater risk of being victims of violence are less likely to believe that students and figures of authority inside or outside the school should be responsible

for helping to reduce school violence. Specifically, one in six boys and young men (17%) believes that students should not help as compared with one in ten girls and young women (8%). Students whose school provides an only fair or poor education are less likely to think students should help reduce violence; 78% as compared with 82% of students who rate their education as excellent or good. Minority students are less likely than white students to think their peers should be responsible for helping to reduce violence.

Similarly, students who fail to achieve academically, who receive an only fair or poor education or whose parents are rarely in contact with school, are less likely to think teachers should help reduce violence in the schools. In particular, 88% of students whose parents have seven or fewer school contacts each year think teachers should help stop or reduce violence, as contrasted with nearly universal proportions of students whose parents have 22 to 28 contacts (97%) or more than 28 contacts (96%) with school each year. Students who have been victims of violence are also less likely to say that teachers should help stop or reduce violence in schools.

These trends, among students who have been victims of violence or who are at greater risk of becoming victims, hold true when asked to consider the role of parents, administrators, and police. In particular, those who have been victims or who say their parents are least involved in school, are less likely to think these groups should help stop or reduce violence. One-third of students (35%) with generally poor grades are unsure if parents should be involved or think they should not help reduce violence. One-fourth (27%) of students whose parents have fewer than seven contacts with school annually are unsure about whether or not parents should help, or think they should not help.

Likewise, 22% of students with generally poor grades and 17% of those who receive an only fair or poor education are unsure about or think administrators should not help reduce violence in public schools. These students are also less likely to believe the police should be involved. One-fourth (27%) of students whose education is only fair or poor think police should not be involved, as compared with one-fifth (19%) of those who receive an excellent or good education. In addition, students whose parents are least involved in school (22%) and boys and young men (24%) more often think police should not help reduce violence in schools.

OBSERVATION:

Students who have been victims of violence and those at greater risk are more critical about their school life and about relations with adults. Their opinions about who should be involved in trying to stop or reduce violence may be a reflection of their critical opinions and negative experiences. These opinions may also be a manifestation of a sense that nothing can be done to help stop or reduce violence in school.

Effective Representatives for Anti-Violence Messages

When asked who would be an effective spokesperson to help stop or reduce school violence, students recommend a wide array of individuals; most popular are famous athletes. Students who are greater risk of becoming victims of violence are most likely to say they would listen to or pay attention to a famous athlete. Specifically, 38% of those with generally poor grades and 42% of boys and young men prefer a famous athlete.

Sizable proportions say they would be most likely to listen to someone who has been jailed for committing an act of violence, to a survivor of violence, or to a parent whose child has been the victim of an act of violence. Students who are at greater risk of becoming victims of violence and those who have been victims, are more likely to favor a spokesperson who has been involved in or touched by violence. Onethird of students who have been victims of violence (29%) and equal proportions of junior high and high school students (29% and 33% respectively), say they would be most likely to listen to or pay attention to someone who has been jailed for committing an act of violence. A high school student's response when asked who would be an effective spokesperson against violence said:

"The people who have done it, who regret it. Because you can't tell me about nothing if you haven't been through nothing."

OBSERVATION: These findings show that there are a variety of vehicles that could effectively reach students. It is particularly important to note the various people who could gain the attention of students who most need to learn about how to avoid becoming a participant in, or a victim of, violence.

SPOKESPERSON FOR ANTI-VIOLENCE MESSAGES

QUESTION: If you had to decide, which of the following do you think would be most effective as spokesperson to help reduce and prevent student violence. Who would you be most likely to listen to and pay attention to?

Students' Attitudes Toward Personal Relationships and Communications

A plurality of students believe there would be less violence if there were more things for kids to do. However, many students have vague and conflicting opinions about how to handle potential confrontations and personal relationships. Half of all students agree that most people they know say it is almost impossible to walk away from an angry scene or confrontation without fighting. One in four students thinks that adults in this society really do not care about what he or she thinks (27%) and that it shows weakness to apologize to someone.

OBSERVATION: Clearly, there is potential to teach students that disagreements and confrontations ao not have to become violent incidents. In addition to disciplinary measures, schools must look to provide examples and guidance on how to walk away from confrontations and communicate constructively with others even in a disagreement.

Students who have been victims of violence or have been physically hurt while in or around school, are most likely to agree with these statements. They are more likely to believe that violence cannot be avoided, and they are more often critical of adults. Nearly three-fourths of students who have been victims of violence (72%) think there would be less violence if there were more things for kids to do. Similarly, students who have been victims of violence are more likely than those who have not been to believe this statement "Most people I know say that it's impossible to walk away from an angry scene or confrontation without fighting", 66% vs. 47%. Half of these students think adults in society today do not care about what they think or how they feel. By contrast only one in five students who has not been the victim of a violent incident believes this is true. Some students believe that when confrontations arise, there are two clearly defined alternatives: resort to physical violence or resolve a disagreement entirely before walking away. One student's comment:

"You either fight your way there and then or you're gonna squash it, cause once you leave that person and you still got some confrontation goin' on, you never know when the person's gonna come back. So you got to be on your toes twentyfour seven. See, so you try your best to squash it right then and there, so you don't have to wait on the way comin' back... If that don't work, you better fight. There's no such thing as turning away no more. You can not walk away with somebody arguin' with you."

Students with generally poor grades are most likely to know adults who say it is impossible to walk away from angry scenes or confrontations without a fight (70%). They are more likely to believe that apologies are a sign of weakness (37%). By contrast, students who have achieved academically (getting mostly A's and B's) are divided in their opinions; equal proportions agree and disagree that most people they know say it is impossible to walk away from angry scenes or confrontations without fighting.

Similar trends are apparent among students who receive an only fair or poor education, among those whose school has a problem with vandalism, and among minority students. Specifically, a plurality (57%) of students who view vandalism as a problem state that most people they know think it is impossible to walk away from an angry scene or confrontation as compared with less than half (45%) of students who do not view vandalism as a problem. There are similar disparities between African-American (69%) and Hispanic (60%) students as contrasted with white students (48%).

Similarly, students who receive a lesser quality of education, and those who think their school has problems with vandalism, are more likely to think that adults in this society do not care about what they think or how they feel. These same students are more likely to think that apologizing to someone is a sign of weakness. Specifically, more than one-fourth of students (26%) whose school has a problem with vandalism believe that an apology is a sign of weakness, as compared to one-fifth (20%) students who do not view vandalism as a problem.

Boys and young men are twice as likely as girls and young women (32% vs. 15%) to believe that it shows weakness to apologize to someone. This opinion is more widely held by students in single parent households and by students in other living arrangements, such as living with step-parents, foster parents or other relatives (27% and 28% respectively). Similarly, boys and young men, children of single parent households, and those whose parents are least or most often in contact with school, are more likely to believe that adults in this society do not care about what they think or how they feel. In particular, one-third of children in single parent households (30%) and of students who say their parents have seven or fewer communications with school each year (33%) believe this is true. Students who live in households with step-parents, foster parents or others are most likely (36%) to believe adults in this society do not care what they think or how they feel. These same students are more likely to agree with the statement that "most people I know say that it's almost impossible to walk away from an angry scene or confrontation without fighting." Children in single parent households (60%) and those whose parents have seven or fewer contacts with school each year (57%) are most likely to agree with this statement.

CHAPTER 6: SCHOOL VIOLENCE AND THE SURROUNDING ENVIRONMENT

Parents and students have considerably different views about how various environmental issues impact their schools. Parents more often view factors such as overcrowded classrooms and the mass media as factors contributing to school violence. Though students may not be as concerned about such issues as parents, some are more concerned than others. Those who have been the victims of school violence and students who are at greater risk are more likely to believe that factors like neighborhood violence and the use of drugs and alcohol contribute to the level of violence in schools.

Issues Related to Violence in School

Parents generally believe their schools are negatively impacted by vandalism, overcrowded classrooms, the role of the mass media, and other external issues. In particular, a majority of parents (70%) believe vandalism takes valuable resources away from violence prevention while only a minority of students believe this statement is true. Similarly, three-fourths of parents believe violence has increased because students do not receive proper supervision at home, while fewer students (51%) believe this is true. When asked about the role the media plays, many parents (71%) believe it contributes to violence in the public schools, but only half of all students concur (51%).

Parents, children, and young adults are in closer agreement about the role of drugs and alcohol. When asked, a majority of students and parents agree that the use of drugs and alcohol is a major factor contributing to school violence (61% and 73% respectively). They are in closer agreement about the role of neighborhood violence as well; a plurality of students (62%) and parents (69%) believe violence in the neighborhood often leads to violence in school.

Parents

There are differences of opinion, however, among parents. Those who negatively assess the quality of education their school provides or worry about their child's safety are more often concerned about the impact of outside conditions on the school environment. Specifically, as compared with parents who do not worry about their child's safety, parents who worry more often believe that vandalism takes away valuable resources from violence prevention (78% vs. 61%) and that school violence has increased because of a lack of proper supervision at home (80% vs. 68%). Similarly, a plurality of parents who assess the quality of education their school provides as only fair or poor and of those who worry about their child's safety, believe that overcrowded classrooms and staff shortages contribute to violence in schools and that teachers cannot effectively teach their students because of the threat of violence. By comparison, only one-third of parents who do not worry about their child's safe-

ty believe that teachers cannot effectively teach because of the threat of violence. Parents who are least often in contact, with their child's school (who say they had seven or fewer contacts each year) are most likely to believe this statement is true, 63% as compared with 41% of those most often in contact with their child's school.

A majority of parents, regardless of their other concerns, believe the use of drugs and alcohol are major contributing factors to school violence. Parents who worry about their child's safety and those who are least involved in school are most likely to agree with this statement, 80% and 83% respectively as contrasted with 73% of parents overall. Likewise, these parents most often believe that violence in the neighborhood around a school leads to violence in school; 79% of parents who worry about their child's safety, 73% of those who least often are in contact with school, and 77% of those who negatively assess the quality of education their school provides agree with this statement.

Students

As compared with parents, students are generally less concerned about the impact of external factors on the level of violence in school. However, students who have been victims of violence and those at greater risk of becoming victims are more likely to believe that factors such as drugs and alcohol or neighborhood violence affect the level of violence in their school. These opinions are more widely held by older students, those who have failed to succeed academically (getting mostly C's, D's and F's), and by students who have been victims of violence. In particular, two in five (41%) of those who have been victims of violence believe the following statement is true: "Drugs and alcohol are major contributing factors in violent incidents that occur in or around school." By contrast, only one in four (24%) students who has not been a victim of violence believes this statement is true. Likewise, students who have been victims of violence (59%) and those with generally get lower grades (54%) most often believe that violence in the neighborhood leads to violence in school.

Students who are more critical of their school, such as those who receive an only fair or poor education and those who think their school has a problem with vandalism, more often believe that external factors negatively impact their school environment. Students who say their school has a problem with vandalism are twice as likely as those who do not view vandalism as a problem, to think that drugs and alcohol are major contributing factors to violence in their schools, 36% vs 17%. These students and those whose school provides an only fair or poor education more frequently believe that violence in the neighborhood leads to violence in their school.

Assessment of School Management and the Impact on Violence

A majority of students say the hallways, classrooms, and other public areas in their school are clean and well kept. However, one-third (32%) of students with generally poor grades, and two in five (38%) of those who have been victims of violence that took place in or around school, believe this is not the case in their own school. These students are more likely to say that it is easy for people who do not belong in their school to enter the facilities, and that students often break the rules because they know they can get away with it. Specifically, three in five students who have been victims of violence believe that people who do not belong can easily enter their school (69%), and that students often break the rules because they know they can get away with it (65%).

More than half of all students (55%) generally believe the hallways, rest rooms, lunchrooms, and other public areas are safe and comfortable places. However, students who have been victims of violence that took place in or around school are less likely to say this statement is true (41%) rather than false (50%). By comparison, students who have not been victims of violence more often (60%) believe their schools have safe and comfortable public spaces.

Students whose school provides an only fair or poor education or who believe their school has a problem with vandalism, are more likely to be critical. In particular, one in three (35%) students who says his or her school has a problem with vandalism thinks the following statement is false: "The hallways, classrooms, and other public areas are clean and well kept." Likewise, students who believe their school provides an only fair or poor education are more likely to say this statement is false and more frequently believe that it is easy for people who do not belong to enter their school, as compared with those who rate the quality of education as good or excellent (63% vs. 59%). These same students are more likely to believe that students break the rules because they know they can get away with it (68%).

CLEANLINESS AND UPKEEP

CHAPTER 7: EFFICACY OF PROGRAMS TO STOP OR REDUCE VIOLENCE

In general, students say their school has taken a wide variety of measures to stop or reduce violence. Of the many steps schools have taken, some are viewed as more successful than others. Among students who say their school has taken steps to reduce violence, mentoring programs, security guards in or around the school, and suspending or expelling students are most often evaluated as very successful programs. The use of hand-held and walk-through metal detectors, which have received a great deal of media attention, are most often viewed as unsuccessful measures, (by 47% and 50% of students respectively).

A student was asked: What do you think of the staff's efforts, have they been successful or not, and are there different things you think they should do?

The student's reply: "Pretty much, except outsiders come in. They should need to show ID. Nobody ever says we need more security guards to check people out and to see if they belong to the school, but we do. Anti-violence programs would make a difference."

OBSERVATION:

One reason metal detectors are viewed as ineffective may be because schools who use them are unable to completely secure their school grounds. Vandalism and deterioration of the physical plant may allow students to bring weapons thorough unsecured entrances, windows, etc. In addition, incidents involving weapons may be shifting to the school grounds or the surrounding neighborhood.

Punitive and Disciplinary Efforts

Most schools have implemented disciplinary codes to help stop or reduce violence; only 14% of students say their school has not done this. In general, students are more positive than negative about the success of these codes; 54% say they are successful as compared with 15% who say they are not successful. As might be expected, students who have been victims of violent incidents are more likely to say that disciplinary codes are unsuccessful (23%) in reducing violence. Students who are at greater risk of becoming victims of a violent incident are less likely to attend a school that has a disciplinary code. One in five students with generally poor grades (20%) and one in six who says his or her parents are rarely in contact with school (with seven or fewer contacts each year), believes his or school does not have a disciplinary code. Students whose school provides a lesser quality education and whose school has a problem with vandalism, are somewhat less likely to positively assess the disciplinary codes instituted by their schools (43% and 51% respectively).

167

Similar differences between students are seen when asked about dress codes and the use of hallway monitors. Students who have been victims of violent incidents that took place in or around school, as contrasted with those who have not, more often assess the use of dress codes as unsuccessful (31% vs 21%). Students who believe that their school provides an excellent or good education are more likely to have a dress code and they more frequently think it is successful (47%). Two in five students who believe their school provides a lesser quality education think their school's dress code is unsuccessful in helping to stop or reduce violence.

These same students are more often skeptical about the use of hallway monitors or security guards. Students who have been victims of violent incidents, as compared with those who have not, are twice as likely to think their school's use of hallway monitors has been unsuccessful (19% vs 10%). Students whose school provides an only fair or poor education more often assess the use of hallway monitors and security guards or police as unsuccessful means of reducing violence (22% and 10% respectively). This is particularly disturbing because these students are more likely to say their school relies on these security measures to help stop or reduce violence; 30% say their school does not do this as compared with 38% of students who attend a school that provides an excellent or good education.

Most schools do not use metal detectors, either hand-held or walk-through models. However, students whose school provides a lesser quality education and minority students, more frequently attend schools with metal detectors. Fully 83% of students whose school provides a good or excellent education do *not* have hand-held metal detectors in their school, as compared with only 74% of students who attend a school that provides an only fair or poor education.

Most often used, and most often judged successful in reducing violence, is expelling or suspending students. Three-fourths of students think such measures are successful, and two in five (37%) believe they are very successful. However, students whose school provides a lesser quality education are *less* likely to have a positive view of such steps; a lesser 26% think that suspending or expelling violent students is very successful, while a nearly equal proportion think such actions are unsuccessful in reducing or stopping violence in their school.

Educational Efforts

As with disciplinary and security measures, student assessments of educational measures taken to stop or reduce violence are varied. Sizable proportions of students say their school has not instituted these types of programs. One in three students says his or her school has not held meetings with the entire school, or in his or her class, to discuss the issue of violence. Those who have had such meetings are more likely than not to believe they were successful. As might be expected, students who have been victims of violence or have been physically hurt while in or around school, are more likely to think such meetings are unsuccessful (14% vs. 6%). Those who believe their school provides an only fair or poor education less frequently have such meetings (41%) and are less likely to think they are successful in helping to stop or reduce violence.

A plurality of students say their school has visitors talk to classes about crime and violence; fewer than one in three (26%) has had no such experience. However, students who have been victims of violence and those who are at greater risk of being victims of violence, have classroom visitors less frequently, and are less likely to view such visits, when they have them, as successful in stopping or reducing school violence. For example, nearly one-third of students who have been victims of violence (29%) and of those whose school provides an only fair or poor education (32%), say their school does not do this. On the other hand, minority students are more likely to have classroom visits and more often assess these visits as successful in stopping or reducing violence.

While a plurality of students, overall, have not had hotlines installed in their schools, nearly half of all minority students say their school has used this measure to help stop or reduce violence. African-American and Hispanic students are twice as likely to think hotlines have been successful rather than unsuccessful in helping to stop or reduce violence.

- OBSERVATIONS: 1. As discussed earlier, minority students are more likely to believe that violence in their school has decreased in the past year. These findings further support the conclusion that increased attention and education, which has been focused to a great extent on inner city schools, may yield positive results.
 - 2. Minority students are more often witnesses or victims of incidents involving weapons. They also are more hesitant to speak to adults about their problems and are harsher in their judgements of adults. For all these reasons, anonymous and confidential procedures for discussing issues related to violence may be more positively received by these students.

A plurality of students say their school provides counseling for students and their families as a way to stop or reduce violence; only one in five students (22%) says his or school does not do this. Those who have been victims of violence and students at greater risk, such as boys and young men and those whose school provides a lesser

quality education, are less positive in their assessment of these services. One in six students who has been the victim of a violent incident and one in five students whose school provides an only fair or poor education, believe that counseling for students and parents has not been successful in stopping or reducing violence. By comparison, fewer than one in ten of those who have not been victims of violence (7%) and an equal proportion of students who receive an excellent or good education, believe that such programs are unsuccessful.

Nearly half of all students (45%) say their school has not had classes on conflict resolution. Older students and those who have been victims of violence are less likely to have had such classes. Specifically, 55% of high school students and 53% of those who have been victims of violence say their schools do not have conflict resolution courses. This is one area, however, where students who are at greater risk of being victims or who are more often exposed to incidents that involve weapons or group violence, are somewhat more likely to have some experience. For example, fewer African-American and Hispanic than white students say their schools do not have conflict resolution courses, 34%, 43% and 54% respectively. Two in five African-American students believe their school's conflict resolution classes have been at least somewhat successful in stopping or reducing violence.

Younger students, in junior high school, are more likely than their older peers to have had safety or anti-violence programs in school. They are also much more likely to view anti-violence programs as successful rather than unsuccessful measures in helping to stop or reduce violence (34% vs 8%). However, as might be expected, students who have been victims of violent incidents are less likely to attend schools with such programs; 48% say their school does not have anti-violence programs. As with conflict resolution and other educational programs, minority students have been exposed to anti-violence programs in school more often than white students; 34%, 33% and 48% respectively say their schools never do this. Hispanic students are most positive in their assessment of anti-violence programs; two in five believe they have been at least somewhat successful in stopping or reducing violence in school.

Students whose parents are least often in contact with school, are more likely to attend a school that has not had conflict resolution or anti-violence programs. For example, half of those who say their parents have 14 or fewer contacts with school annually have not had conflict resolution courses and nearly equal proportions say their schools have not had safety or anti-violence programs.

METHODOLOGY

The 1994 Metropolitan Life Survey of the American Teacher was conducted by Louis Harris and Associates for Metropolitan Life Insurance Company during April and May 1994. The survey included two sample groups: public school students and parents with a least one child in public school. Both were selected to be nationally representative samples.

PART I

The Parents Sample

A total of 1,011 telephone interviews were conducted with parents who currently have a child in public school, in grades 3 through 12 throughout the continental U.S. Parents were randomly selected using a nationally representative telephone sample.

The Louis Harris and Associates, Inc. National Telephone Sample is based on a methodology designed to produce representative samples of persons in telephone households in the 48 continental states. The Harris National Telephone Sample makes use of random digit selection procedures which assure equal representation of persons in households which are "listed" in telephone directories, as well as persons in households which are "unlisted" in telephone directories. The sample design is also explicitly designed to assure the proper representation of households in central city, suburban, and rural areas within each of the 48 continental states.

The Harris National Telephone Sample is selected by a three stage, stratified sampling process. The ultimate result of this process is a set of sample selections (phone numbers). In order to assure that the maximum degree of sample control is maintained, the basic design has been set up to produce cross-sectional national samples in increments of 500, 1000, and 1250 sampling points (i.e. households).

Telephone Interviewing Procedures

All survey data collection was conducted from the centralized telephone research center at Louis Harris and Associates, Inc. in New York City. Interviewing for this study was conducted by Harris' large, professional interviewing staff. Interviewing is continuously quality monitored by the supervisory staff. The computerized switching systems independently recorded the outcome of every call. In addition, a minimum of 15% of all completed interviews in the public sample are validated by the supervisory staff. The Harris computer assisted telephone interviewing system (CATI) permitted on line data entry and editing of the telephone interviews for all three sample groups. All data was tabulated, checked for internal consistency and processed

^{&#}x27;Some households are "unlisted" as the result of a request for an unlisted phone number by the telephone subscriber. Other households are "unlisted" in the published directory because the telephone number was assigned after the publication date of the directory. Samples that are restricted to directory listed numbers only may contain serious sample biases because of the exclusion of various types of unlisted households.

by computer. The output process is a series of computer tables for each sample group (students and parents) showing the results of each survey question, both by the total number of respondents and by important subgroups.

Before being asked to complete the actual interview, each teacher was screened to ensure that he or she currently teaches in grades 3 through 12 in a public school and teaches at least part-time in the classroom. Once a respondent passed the screen an appointment was made to telephone at a convenient time and place to complete the interview.

Sample Disposition and Completion Rates for Parents

The sample disposition for this group is shown in Table A-1. A total of 4,202 contacts were made to yield 1,011 completed interviews with parents. The interview completion rate for parents was 69%.

PART II

The Students Sample

A total of 2,578 interviews were conducted with public school students in grades 3 through 12 throughout all states of the continental U.S.

Selection of the Schools and Students

The Harris/Scholastic National Probability sample of schools and students is based on a two stage, clustered, and stratified sample design. This design employs features similar to the sample design used in various samples of students and schools that are conducted by the U.S. National Center of Education Statistics. Stratification dimensions include grade level, region and size of place (urban, suburban, and rural).

In the first stage, a sample of public schools was selected from a list of all public schools covering grades 3 through 12. Special procedures were employed to assure that the sample adequately represents the full range of public schools nationwide. Particular care was given to replacing initially selected schools that were unable or unwilling to participate in the second stage selection of students.

One class of students was selected within each school. If possible, an English class was selected at random within a desired grade. In lower grades, where students may not have classes by subject matter, a class was selected at random by teacher, within the desired grade.

Interviewing Procedures for Students

Questionnaires were self-administered by students in the classroom setting under the close supervision of a teacher. Each school received a set of teacher instructions, in addition to the questionnaires. The teachers were asked to read all questions and instructions to their students.

Sample Disposition and Weighting for Students

The sample disposition for this group is shown in Table A-2. A total of 120 schools were invited to participate, of which 113 are included in the study sample. The average class size is 23. A total of 535 contacts to schools were made to yield 2,578 completed interviews with students.

Weights are applied so that the sample of students in grades 3 through 12 is projectable to the total population nationally. The weighting variables included race, sex, region and average class size.

Processing the Data

All interviewing with parents was conducted via computer. All completed questionnaires for both sample groups were edited, coded, key punched and verified. The data was tabulated, checked for internal consistency and processed by computer. The output process is a series of computer tables for each sample group (teachers, students and law enforcement officials) showing the results of each survey question, both by the total number of respondents and by important subgroups.

THANK YOU...

... for taking part in our important study. This survey is being conducted to help us learn more about the experiences of students nationwide.

You will notice, as you fill out this questionnaire, that many of the questions are about serious topics and issues. It is very important that you answer all questions truthfully and completely, saying exactly what you have experienced. This is not a test; there are no right or wrong answers. Again, please be as honest as you can in answering these questions.

We are not asking for your name and as a result all your answers will be totally anonymous.

The schools taking part in this project have been scientifically chosen to represent all schools in the country. So it is vital that you answer all questions carefully.

SECTIONS:

- A. EVALUATION OF SCHOOL
- B. RESPONSIBILITY FOR PREVENTING AND REDUCING VIOLENCE
- C. PARENTS' AND CHILDREN'S WORRIES ABOUT VIOLENCE
- D. DEFINITION OF VIOLENCE
- E. RELATIONSHIP BETWEEN ENVIRONMENT AND SCHOOL VIOLENCE
- G. COMMUNICATIONS BETWEEN PARENTS, CHILDREN AND TEACHERS
- H. PARENTAL INVOLVEMENT
- I. CHILDREN'S EXPERIENCES
- J. STEPS TAKEN TO PREVENT OR REDUCE VIOLENCE
- K. EDUCATIONAL CAMPAIGNS
- F. FACTUALS

The questionnaire is easy to fill out.

1. Simply write in an "X" in the space that matches your answer. On a few questions you may write in an answer -- you will see a line where you can do this.

EXAMPLE:

What is your favorite season of the year?.

Spring((1
Summer	2
Fall	
Winter	. x -4
Not sure	

●1994 Louis Harris & Associates, Inc.

2. Other questions will ask you to answer a series of questions.

EXAMPLE:

Do you go to school during the... ("X" ONLY ONE FOR EACH STATEMENT -- A THROUGH D)

									<u>Yes</u>	<u>No</u>	Not Sure
A.	Spring		۰						<u>x</u> -1	2	-3
в.	Summer		•		•	•	•	•	1	<u>x</u> 2	
	Fall .										
D.	Winter								<u>x</u> -1	2	

- 3. Use a pencil to mark your answers. In case you change your mind, you can then erase your first answer and mark the one you want. Make sure you erase the wrong answer completely.
- Please do not talk over your answers with others.

In advance, thank you very much for your help with this very important study.

A. EVALUATION OF SCHOOL

Al. I am going to read you a list of things on which public schools may be judged. For each please tell me whether you would rate your school excellent, good, fair or poor?

MARK ONE ANSWER FOR EACH STATEMENT ON THE LIST

		<u>Excellent</u>	Good	<u>Fair</u>	Poor	Not <u>Sure</u>
1.	The school's physical facilities (such as the building and playground)	(26(<u>24</u> -1	_442	<u>21</u> -3	64	<u>4</u> -5
2.	The amount of support shown for the school by the parents	(28(<u>32</u> -1	<u>35</u> -2	<u>18</u> -3	44	L
3.	The degree to which most teachers seem to care about their students	(29(<u>59</u> -1	<u>25</u> -2	_103	Г	3-5
4.	The school's ability to provide a safe and secure place for students when they are in the school building	(32(<u>47</u> ~1	<u>35</u> -2	_113		J
5.	The school's ability to provide a safe and secure place for students when they are on the the school grounds outside the building	(33(<u>27</u> -1	<u>35</u> -2	_233	9 -4	<u>6</u> -5
6.	The overall quality of the education you receive	. (34(<u>54</u> -1	_302	<u>8</u> -3		55

A2. Generally, how well do teachers and students in your school get along with each other

Very well.... $(35(\underline{35} - 1) + 1)$ Fairly well.... $\underline{43} - 2$ Not very well.... $\underline{12} - 3$ Not at all well... $\underline{3} - 4$ Not sure.... $\underline{9} - 5$

-- very well, fairly well, not very well, or not at all well?

36Z

A3. Would you say that in your school vandalism, such as graffiti or broken doors and windows is a major problem, a minor problem or not a problem?

A4. In the past year, has the level of violence at your school increased, decreased or stayed about the same?

Increased......(38($\frac{18}{16}$ -1 Decreased...... $\frac{16}{16}$ -2 Stayed about the same. $\frac{44}{16}$ -3 Not sure.... $\frac{25}{16}$ -4

B. RESPONSIBILITY FOR PREVENTING AND REDUCING VIOLENCE

B1. Do you believe that the following groups should help stop and reduce violence in public schools, or not? MARK ONE ANSWER FOR EACH STATEMENT ON THE LIST

		Should Help	Should Not	Not <u>Sure</u>
2. 3. 4. 5. 6. 7.	Parents. (Students. (Teachers. (School administrators. (The local school board. (The police. (Local community members. (Local government officials (The local bisiness community. That completes the interview. Thank you very much for your cooperation.

LOUIS HARRIS AND ASSOCIATES, INC. 630 Fifth Avenue New York, NY 10111	/ FOR OFFICE USE ONLY: / Questionnaire No.: / (1-5)					
Study No. <u>932016</u> II (GRADES 7-9) (8-13)	Card Number (6,7)					
April 27, 1994 (FINAL-REV.1) Sample P	oint No. / / / / / / / / / / / / / / / / / / /					
	Time Started:A.M./P.M					
THANK YOU						
for taking part in our important study. This s more about the experiences of students nationwide.	urvey is being conducted to help us learn					
You will notice, as you fill out this questionnais serious topics and issues. It is very important the completely, saying exactly what you have experience or wrong answers. Again, please be as honest as y	t you answer all questions truthfully and d. This is not a test; there are no right					
We are not asking for your name and as a result al	your answers will be totally anonymous.					
The schools taking part in this project have been schools in the country. So it is vital that you a	scientifically chosen to represent all nswer all questions carefully.					
SECTIONS:						
A. EVALUATION OF SCHOOL B. RESPONSIBILITY FOR PREVENTING AND REDUCING VIOLENCE C. PARENTS' AND CHILDREN'S WORRIES ABOUT VIOLENCE D. DEFINITION OF VIOLENCE E. RELATIONSHIP BETWEEN EXTERNAL ENVIRONMENT AND SCHOOL VIOLENCE G. COMMUNICATIONS BETWEEN PARENTS, CHILDREN AND TEACHERS H. PARENTAL INVOLVEMENT I. CHILDREN'S EXPERIENCES J. STEPS TAKEN TO PREVENT OR REDUCE VIOLENCE K. EDUCATIONAL CAMPAIGNS F. FACTUALS						
The questionnaire is easy to fill out.						
1. Simply write in an "X" in the space that matches your answer. On a few questions you may write in an answer you will see a line where you can do this.						
EXAMPLE: What is your favorite season of the year?						
Spring((-2 -3 -4					
2. Other questions will ask you to answer a series of questions.						
EXAMPLE: Do you go to school during the ("X" ONLY ONE FOR EACH STATEMENT A THROUGH D)						
2	<u>(es No Not Sure</u>					
A. Spring	$\begin{array}{cccccccccccccccccccccccccccccccccccc$					

- 3. Use a pencil to mark your answers. In case you change your mind, you can then erase your first answer and mark the one you want. Make sure you erase the wrong answer completely.
- 4. Please do not talk over your answers with others.

In advance, thank you very much for your help with this very important study.

A. EVALUATION OF SCHOOL

A1. Below is a list of things on which public schools may be judged. For each please tell me whether you would rate your school excellent, good, fair or poor.

MARK ONE ANSWER FOR EACH STATEMENT ON THE LIST

		Excellent	Good	<u>Fair</u>	Poor	Not Sure
1.	The school's physical facilities (such as the building and playground)	(26(<u>10</u> -1	442	<u>36</u> –3	9 -4	
2.	The effectiveness of the school board in dealing with school matters	(27(<u>4</u> -1	28 -2	<u>35</u> -3	<u>16</u> -4	<u>16</u> 5
3.	The amount of support shown for the school by the parents	(28(<u>13</u> -1	<u>35</u> -2	<u>30</u> -3	<u>14</u> -4	<u>8</u> -5
4.	The degree to which most teachers seem to care about their students	(29(<u>25</u> -1	43 -2	213	<u>`9</u> -4	
5.	The degree to which most counselors seem to care about their students	(30(<u>35</u> -1	<u>38</u> -2	<u>14</u> -3	<u>7</u> -4	<u>7</u> -5
6.	The relations between parent and teachers in your school	(31(<u>6</u> -1	32 -2	<u>34</u> -3	18 -4	<u>9</u> -5
7.	The school's ability to provide a safe and secure place for students when they are in the school building	(32(<u>23</u> -1	<u>39</u> -2	233	134	<u>3</u> -5
8.	The school's ability to provide a safe and secure place for students when they are on the school grounds outside the building		31 -2	34 -3	20 -4	<u>3</u> -5
9.	The overall quality of the education you receive	(34(<u>26</u> -1	<u>48</u> -2	<u>19</u> -3	44	25

A2. Generally, how well do teachers and students in your school get along with each other - very well, fairly well, not very well, or not at all well?

Very well....(35($\frac{12}{64}$ -1 Fairly well.... $\frac{64}{64}$ -2 Not very well.... $\frac{15}{4}$ -3 Not at all well... $\frac{4}{5}$ -5

A3. When teachers and students don't get along well, whose responsibility do you think it is? "X" ONE ITEM ONLY

A4. Would you say that in your school, vandalism such as graffiti or broken doors and windows is a major problem, a minor problem or not a problem?

Major problem.... $(37(\underline{15} - 1) + 1)$ Minor problem.... $\underline{49} - 2$ Not a problem.... $\underline{32} - 3$ Not sure.... $\underline{4} - 4$

A5. In the past year, has the level of violence at your school increased, decreased or stayed about the same?

Increased(38(_	25	1
Decreased		
Stayed about the same.		
Not sure.		

B. RESPONSIBILITY FOR PREVENTING AND REDUCING VIOLENCE

B1. Do you believe that the following groups should help stop and reduce violence in public schools, or not? MARK ONE ANSWER FOR EACH STATEMENT ON THE LIST

	Should Help	Should Not	Not Sure
Parents	(40 (88 -1 (41 (90 -1 (42 (87 -1 (43 (81 -1 (44 (75 -1 (45 (62 -1 (46 (38 -1 (44 (75 (62 (14 (14 (14 (14 (14 (14 (14 (1	14 -2 8 -2 7 -2 10 -2 15 -2 24 -2 42 -2 39 -2	10 -3 5 -3 3 -3 5 -3 9 -3 10 -3 14 -3 21 -3 19 -3
Local government officials	, ,——	<u> 50</u> –2	<u>21</u> -3

B2. When it comes to stopping or reducing violence in your school would you say that each of the following groups tries too hard, the right amount, or not enough? MARK ONE ANSWER FOR EACH STATEMENT ON THE LIST

That completes the interview. Thank you very much for your cooperation.

LOUIS HARRIS AND ASSOCIATES, 630 Fifth Avenue New York, NY 10111	INC.	/ FOR OFFICE USE ONLY: / / Questionnaire No.: / (1-5)
Study No. <u>932016</u> II (GRADES (8-13)	10-12)	Card Number (6,7)
April 27, 1994 (FINAL-REV.1)	San	Time Started:A.M./P.M.
		24-25Z

THANK YOU...

... for taking part in our important study. This survey is being conducted to help us learn more about the experiences of students nationwide.

You will notice, as you fill out this questionnaire, that many of the questions are about serious topics and issues. It is very important that you answer all questions truthfully and completely, saying exactly what you have experienced. This is not a test; there are no right or wrong answers. Again, please be as honest as you can in answering these questions.

We are not asking for your name and as a result all your answers will be totally anonymous.

The schools taking part in this project have been scientifically chosen to represent all schools in the country. So it is vital that you answer all questions carefully.

SECTIONS:

- A. EVALUATION OF SCHOOL
- B. RESPONSIBILITY FOR PREVENTING AND REDUCING VIOLENCE
- C. PARENTS' AND CHILDREN'S WORRIES ABOUT VIOLENCE
- D. DEFINITION OF VIOLENCE
- E. RELATIONSHIP BETWEEN EXTERNAL ENVIRONMENT AND SCHOOL VIOLENCE
- G. COMMUNICATIONS BETWEEN PARENTS, CHILDREN AND TEACHERS
- H. PARENTAL INVOLVEMENT
- I. CHILDREN'S EXPERIENCES
- J. STEPS TAKEN TO PREVENT OR REDUCE VIOLENCE
- K. EDUCATIONAL CAMPAIGNS
- F. FACTUALS

The questionnaire is easy to fill out.

1. Simply write in an "X" in the space that matches your answer. On a few questions you may write in an answer -- you will see a line where you can do this.

EXAMPLE:

What is your favorite season of the year?

Spring((1
Summer	2
Fall	
Winter	. X -4
Not sure	

2. Other questions will ask you to answer a series of questions.

EXAMPLE:

Do you go to school during the... ("X" ONLY ONE FOR EACH STATEMENT -- A THROUGH D)

											<u>Yes</u>	No	Not Sure
Α.	Spring										<u>x</u> -1	2	3
	Summer												
c.	Fall .					٠				•	<u>x</u> -1	2	3
D.	Winter	•	•	•	•	•	•	•	•		x1	2	3

3. Use a pencil to mark your answers. In case you change your mind, you can then erase your first answer and mark the one you want. Make sure you erase the wrong answer completely.

4. Please do not talk over your answers with others.

In advance, thank you very much for your help with this very important study.

A. EVALUATION OF SCHOOL

Al. Below is a list of things on which public schools may be judged. For each please tell me whether you would rate your school excellent, good, fair or poor.

MARK ONE ANSWER FOR EACH STATEMENT ON THE LIST

		Excellent	<u>Good</u>	<u>Fair</u>	Poor	Not Sure
1.	The school's physical facilities (such as the building and playground)	(26(<u>7</u> -1	49 -2	<u>35</u> -3	8 -4	*5
2.	The effectiveness of the school board in dealing with school matters	(27(<u>3</u> -1	23 -2	41 -3	<u>26</u> -4	65
3.

Hello, I'm from Louis Horsearch firm in New York. We're conducting a opinions of the American educational system. We household.	survey among adults to	learn about their

SECTIONS:

- S. INTRODUCTORY AND SCREENING QUESTIONS
- A. EVALUATION OF CHILD'S SCHOOL
 B. RESPONSIBILITY FOR PREVENTING AND REDUCING VIOLENCE
- C. PARENTS' AND CHILDREN'S WORRIES ABOUT VIOLENCE
- D. DEFINITION OF VIOLENCE
- E. RELATION OF VIOLENCE
 E. RELATIONSHIP BETWEEN EXTERNAL ENVIRONMENT AND SCHOOL VIOLENCE
 G. COMMUNICATIONS BETWEEN PARENTS, CHILDREN AND TEACHERS
 H. PARENTAL INVOLVEMENT
 I. CHILDREN'S EXPERIENCES
 F. FACTUALS

S. INTRODUCTORY AND SCREENING QUESTIONS

S1. During your school life did you primarily attend public, parochial, or private school? SINGLE RECORD

 Public
 (16(85 - 1))

 Parochial
 9 - 2

 Private
 5 - 3

 Not Sure
 1 - 4

S2. How many children are there in this household who currently attend public school?

S2a. How many of your children are currently enrolled in (READ EACH ITEM)?

DO	NOT ROTATE	Number	Not Sure
1.	Kindergarten through second grade	/ <u>/</u> (18-19)	(18(
2.	Third to sixth grade	<u>/ / /</u> (20-21)	(20(Y
3.	Junior high or middle school	/ / /	(22(Y
4.	Junior high or middle school	(24-25)	(24(

IF ONE IN Q.S2a ITEMS 2,3, AND 4 ASK Q.S2b -- IF MORE THAN ONE IN Q.S2a ITEMS 2,3, AND 4 SKIP TO Q.S2c -- ALL OTHERS SCREEN OUT Q.S2a -- GO TO FACTUALS S2b. For this interview, I will ask these questions about the child who is in the third grade or higher.

(SKIP TO Q.S3)

S2c. For this interview, I would like to ask questions about one of your children in the third grade or higher. When answering the questions, I would like you to think about the child who most recently celebrated a birthday who is in at least the third grade.

(ASK Q.S2d)

S2d. What grade is that child currently enrolled in?

S3. Is that child a boy or a girl?

Boy.....(27(<u>56</u>-1 Girl....<u>44</u>-2 Not sure....<u>-</u>-3

A. EVALUATION OF CHILD'S SCHOOL

Al. I am going to read you a list of aspects on which public schools may be judged. For each please tell me whether you would rate your school excellent, good, fair or poor. (READ EACH ITEM)

ROTATE START AT "X"	Excellent	Good	Fair	Poor	Not <u>Sure</u>
() 1. The school's physical facilities (1987)	(28(<u>25</u> -1	49 -2	<u>19</u> -3	54	*5
() 2. The qualifications and competence of the teachers in your school (1987)	(29(<u>26</u> -1	_502	_213	34	*5
() 3. The effectiveness of the school board in dealing with school matters (1987)	(30(<u>15</u> -1	40 -2	_333	_104	
() 4. The amount of support shown for the school by the parents (1987) .	(31(<u>28</u> -1	42 -2	_223	7-4	<u>1</u> -5
() 5. The degree to which most teachers seem to care about their students (1987)	(32(<u>27</u> -1	<u>45</u> -2	_223	64	<u>*</u> -5
() 6. The relations between parents and teachers in your school (1987)	(33(<u>22</u> -1	<u>45</u> -2	<u>25</u> -3	<u>8</u> -4	<u>*</u> -5
() 7. The school's ability to provide a safe and secure place for students when they are in the school building (new)	(34(<u>36</u> ~1	43 -2	<u>15</u> -3	54	<u>*</u> -5
() 8. The school's ability to provide a safe and secure place for students when they are on the the school grounds outside the building (new)	(35(<u>25</u> -1	<u>46</u> -2	<u>20</u> –3	<u>9</u> -4	<u>*</u> -5
9. The overall quality of the education your child receives (1987)	(36(<u>26</u> -1	<u>51</u> -2	<u>18</u> -3	· <u>4</u> 4	<u>*</u> -5

A2. Generally, how well do teachers and students in your school get along with each other - very well, fairly well, not very well, or not at all well?

A3. In the past year, has the level of violence at your child's school increased, decreased or stayed about the same?

 A4. How often do teachers in your school generally assign homework -- every day, two to three days a week, once a week, less often than that, or never?

A5. When teachers assign homework to your child, how often does (s/he) complete it on time and completely -- nearly always, sometimes, hardly ever, or never?

 Nearly always
 (40(82 -1 500 -1 10

B. RESPONSIBILITY FOR PREVENTING AND REDUCING VIOLENCE

B1. When it comes to preventing, stopping or reducing violence in your school would you say that (READ EACH ITEM) try too hard, the right amount, or not enough?
